# ✨ AI automatically generates PPTs

Break away from traditional creation methods. Input the PPT theme, and the AI will generate the PPT for you in one click. This opens up a new way of creating PPTs.

BoS AI PPT will help you effortlessly create exquisite and professional PPTs. Start for free and explore the unlimited possibilities brought by AI intelligence!

Hello, I'm your PPT assistant. May I ask how you would like to generate the PPT?

AI intelligent generation

Import file

Select template

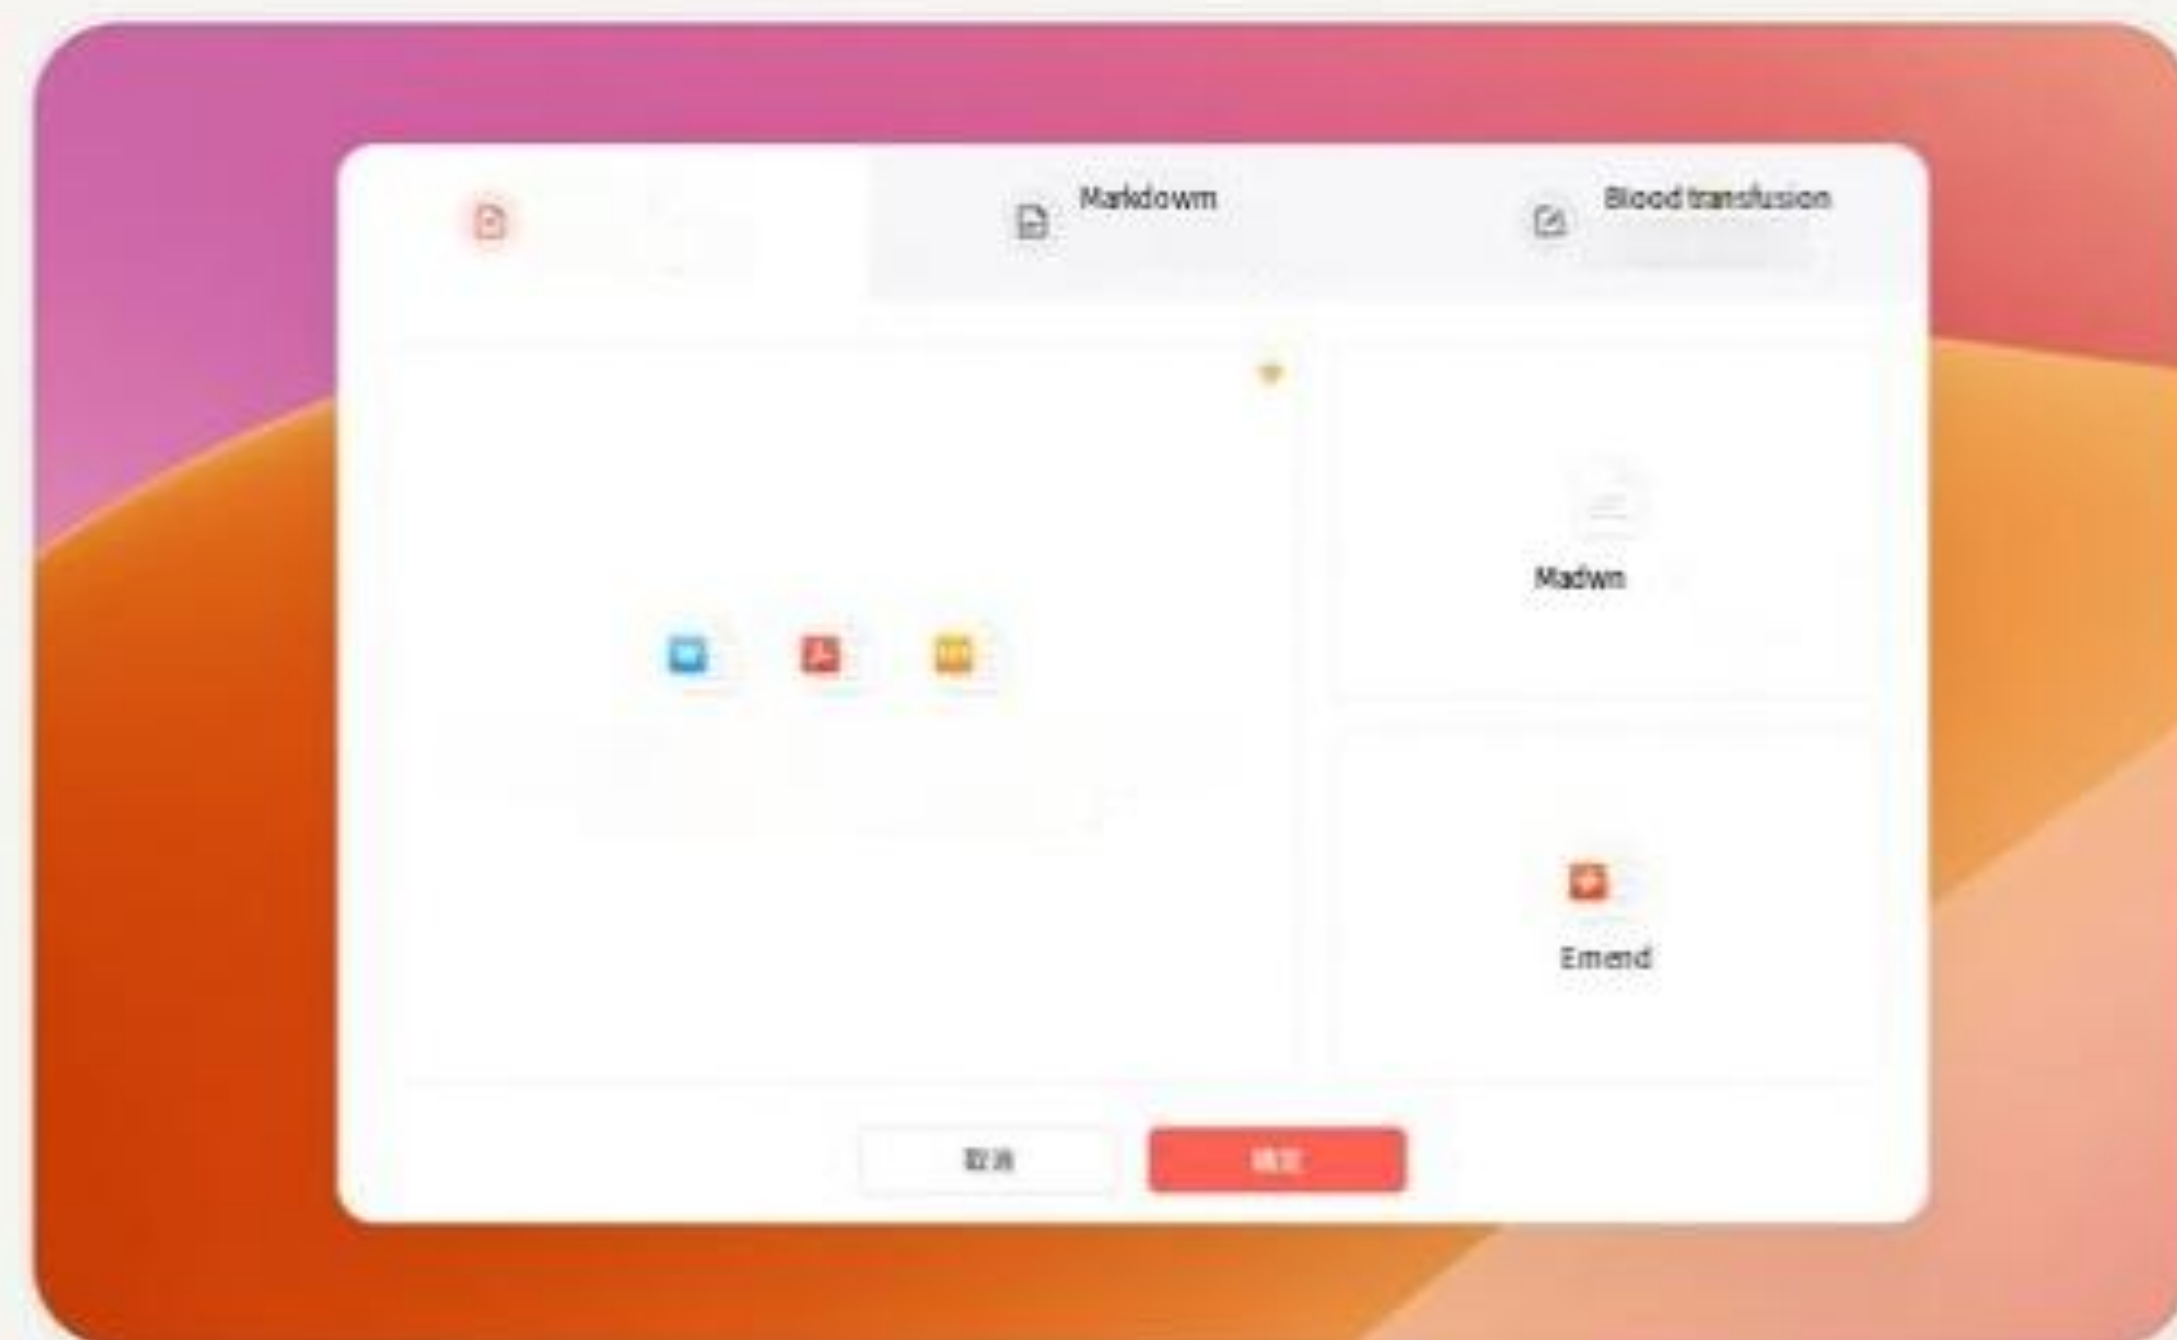

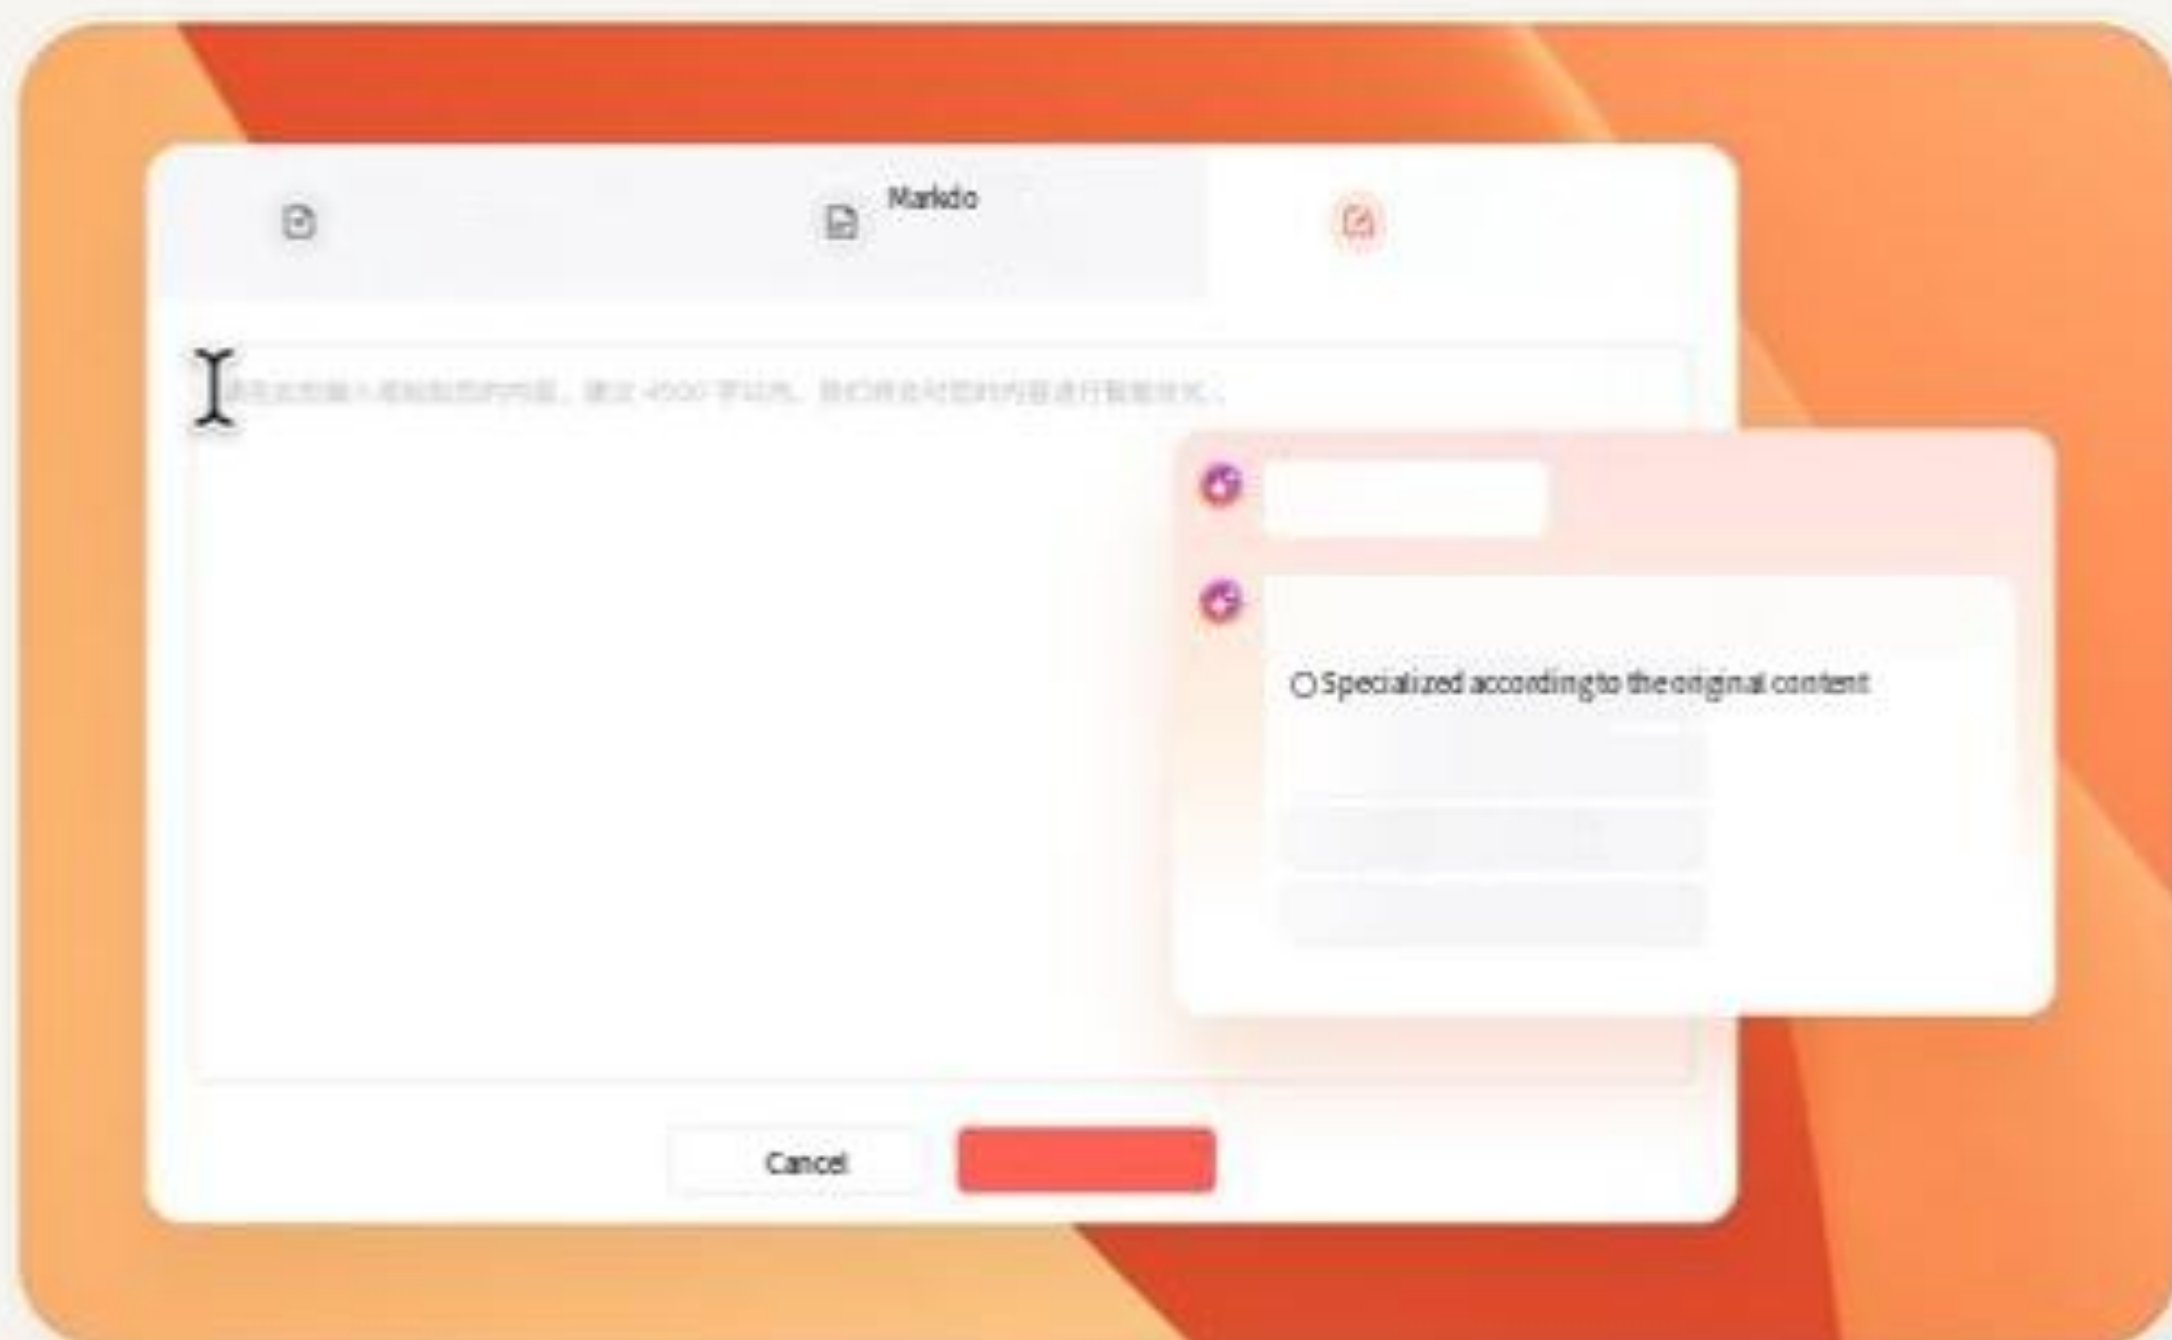

You can enter the PPT title below.

Enter the PPT theme and the AI will generate the PPT immediately.

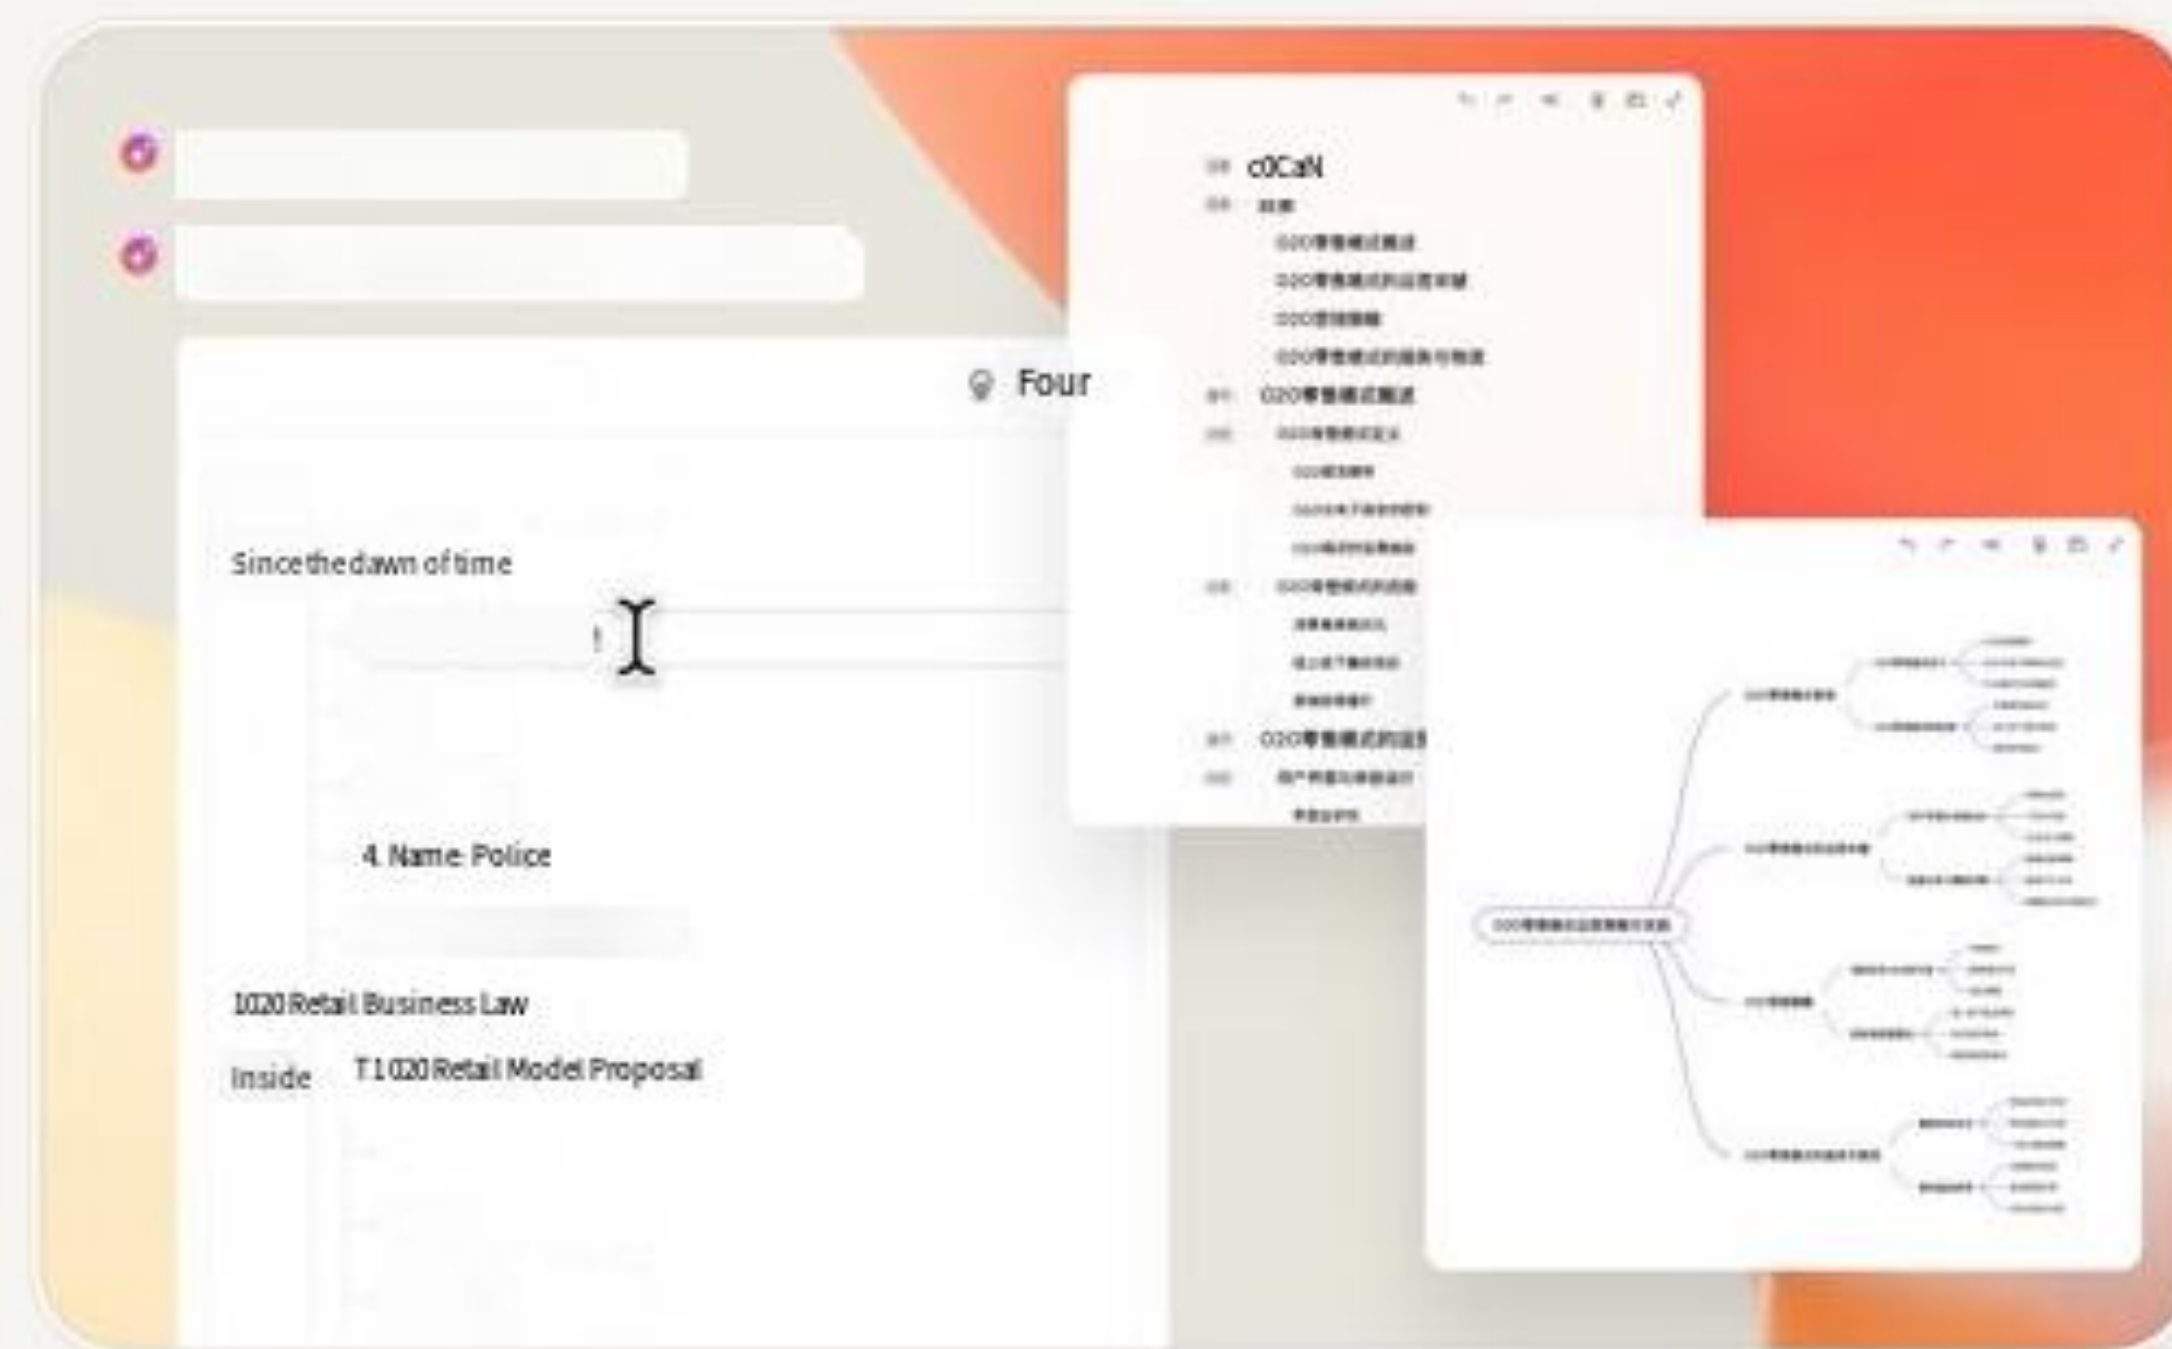

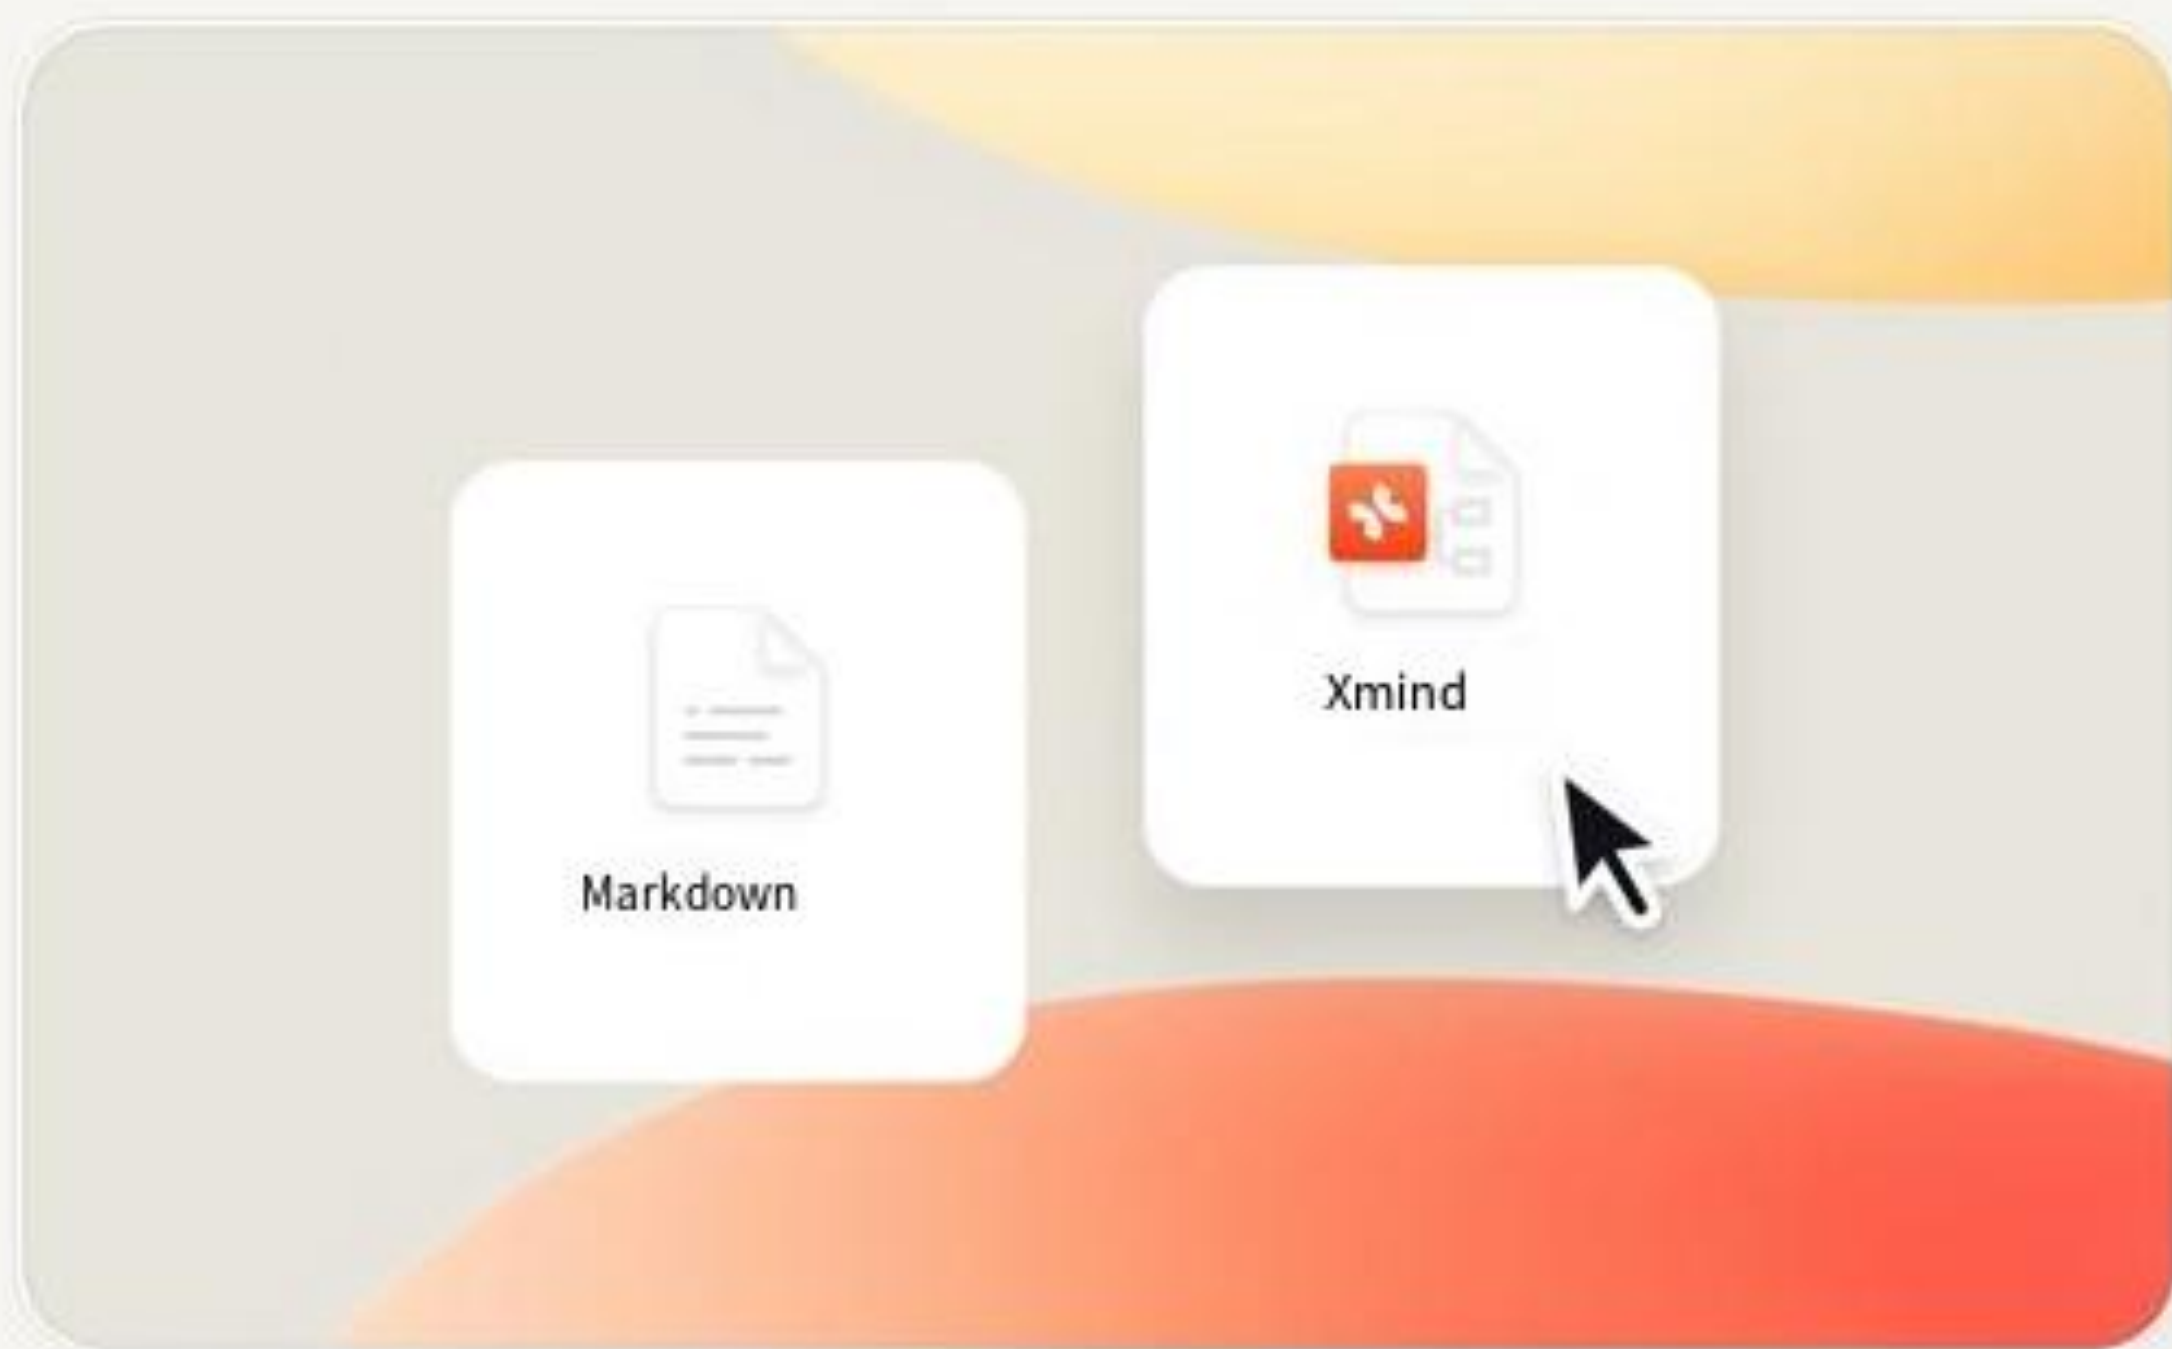

# AI extracts the content and generates a PPT.

- After copying and pasting the text, an AI will generate a PPT for you.
- Support the option of choosing different generation methods

- Support uploading of word, pdf and txt files. Choose different algorithms to generate, and create a PPT.

# Structured Outline Analysis

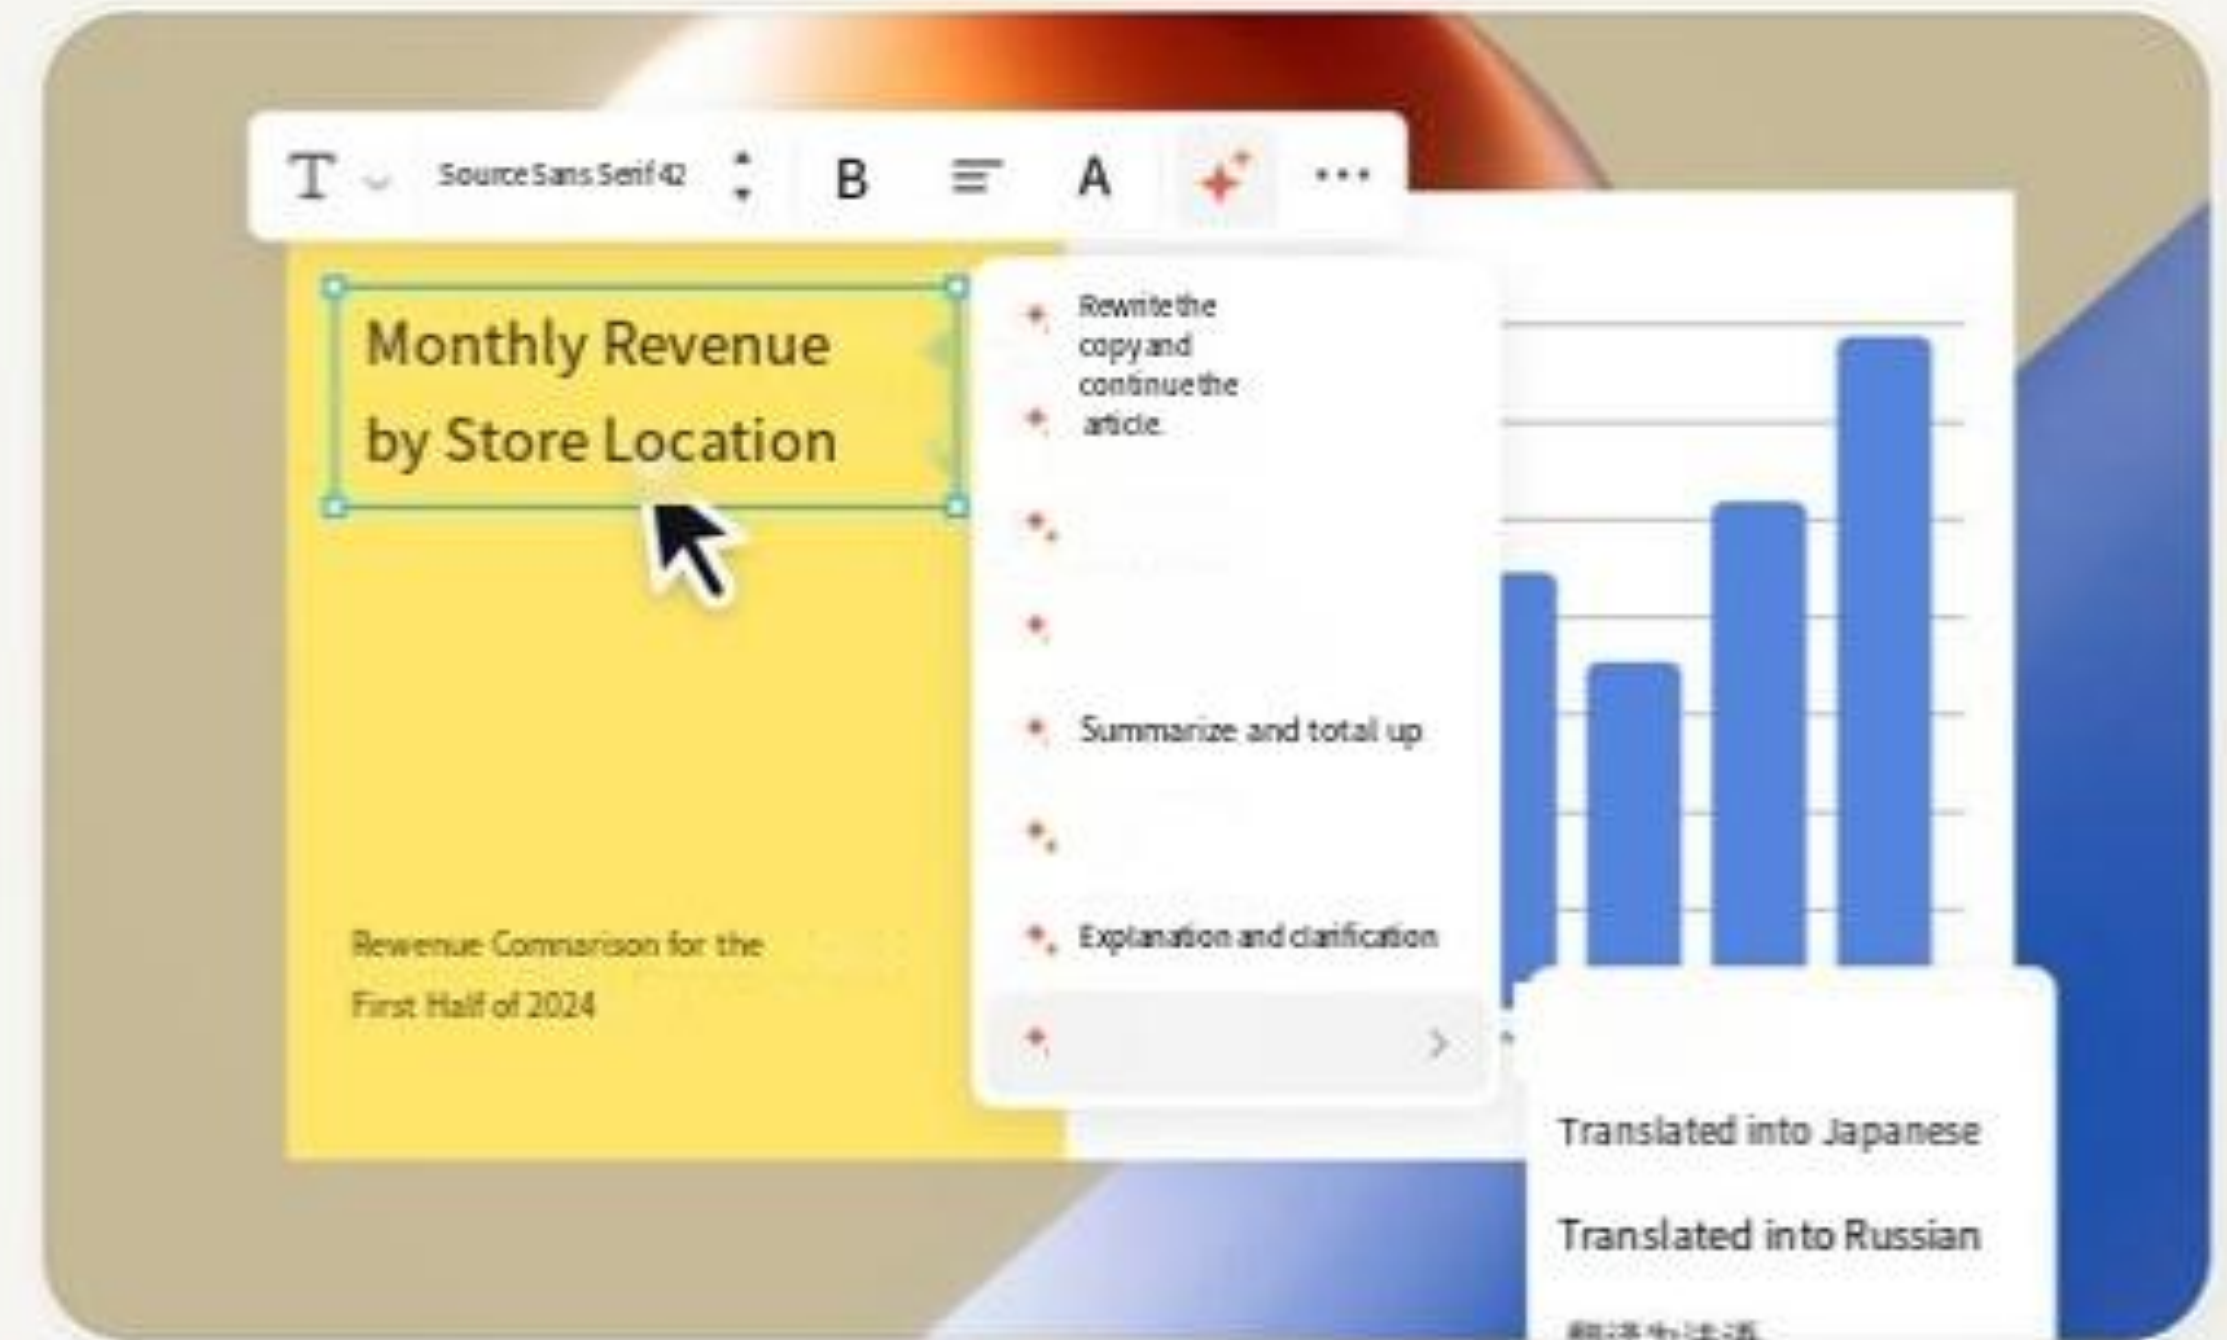

- Supports parsing of Markdown and XMind type files, and can convert them to PPT in one click.

- Support for the secondary editing of the outline and for making local modifications.
- Support for editing in outline mode or mind map mode after zooming in.

# 🔧 AI local editing and creation

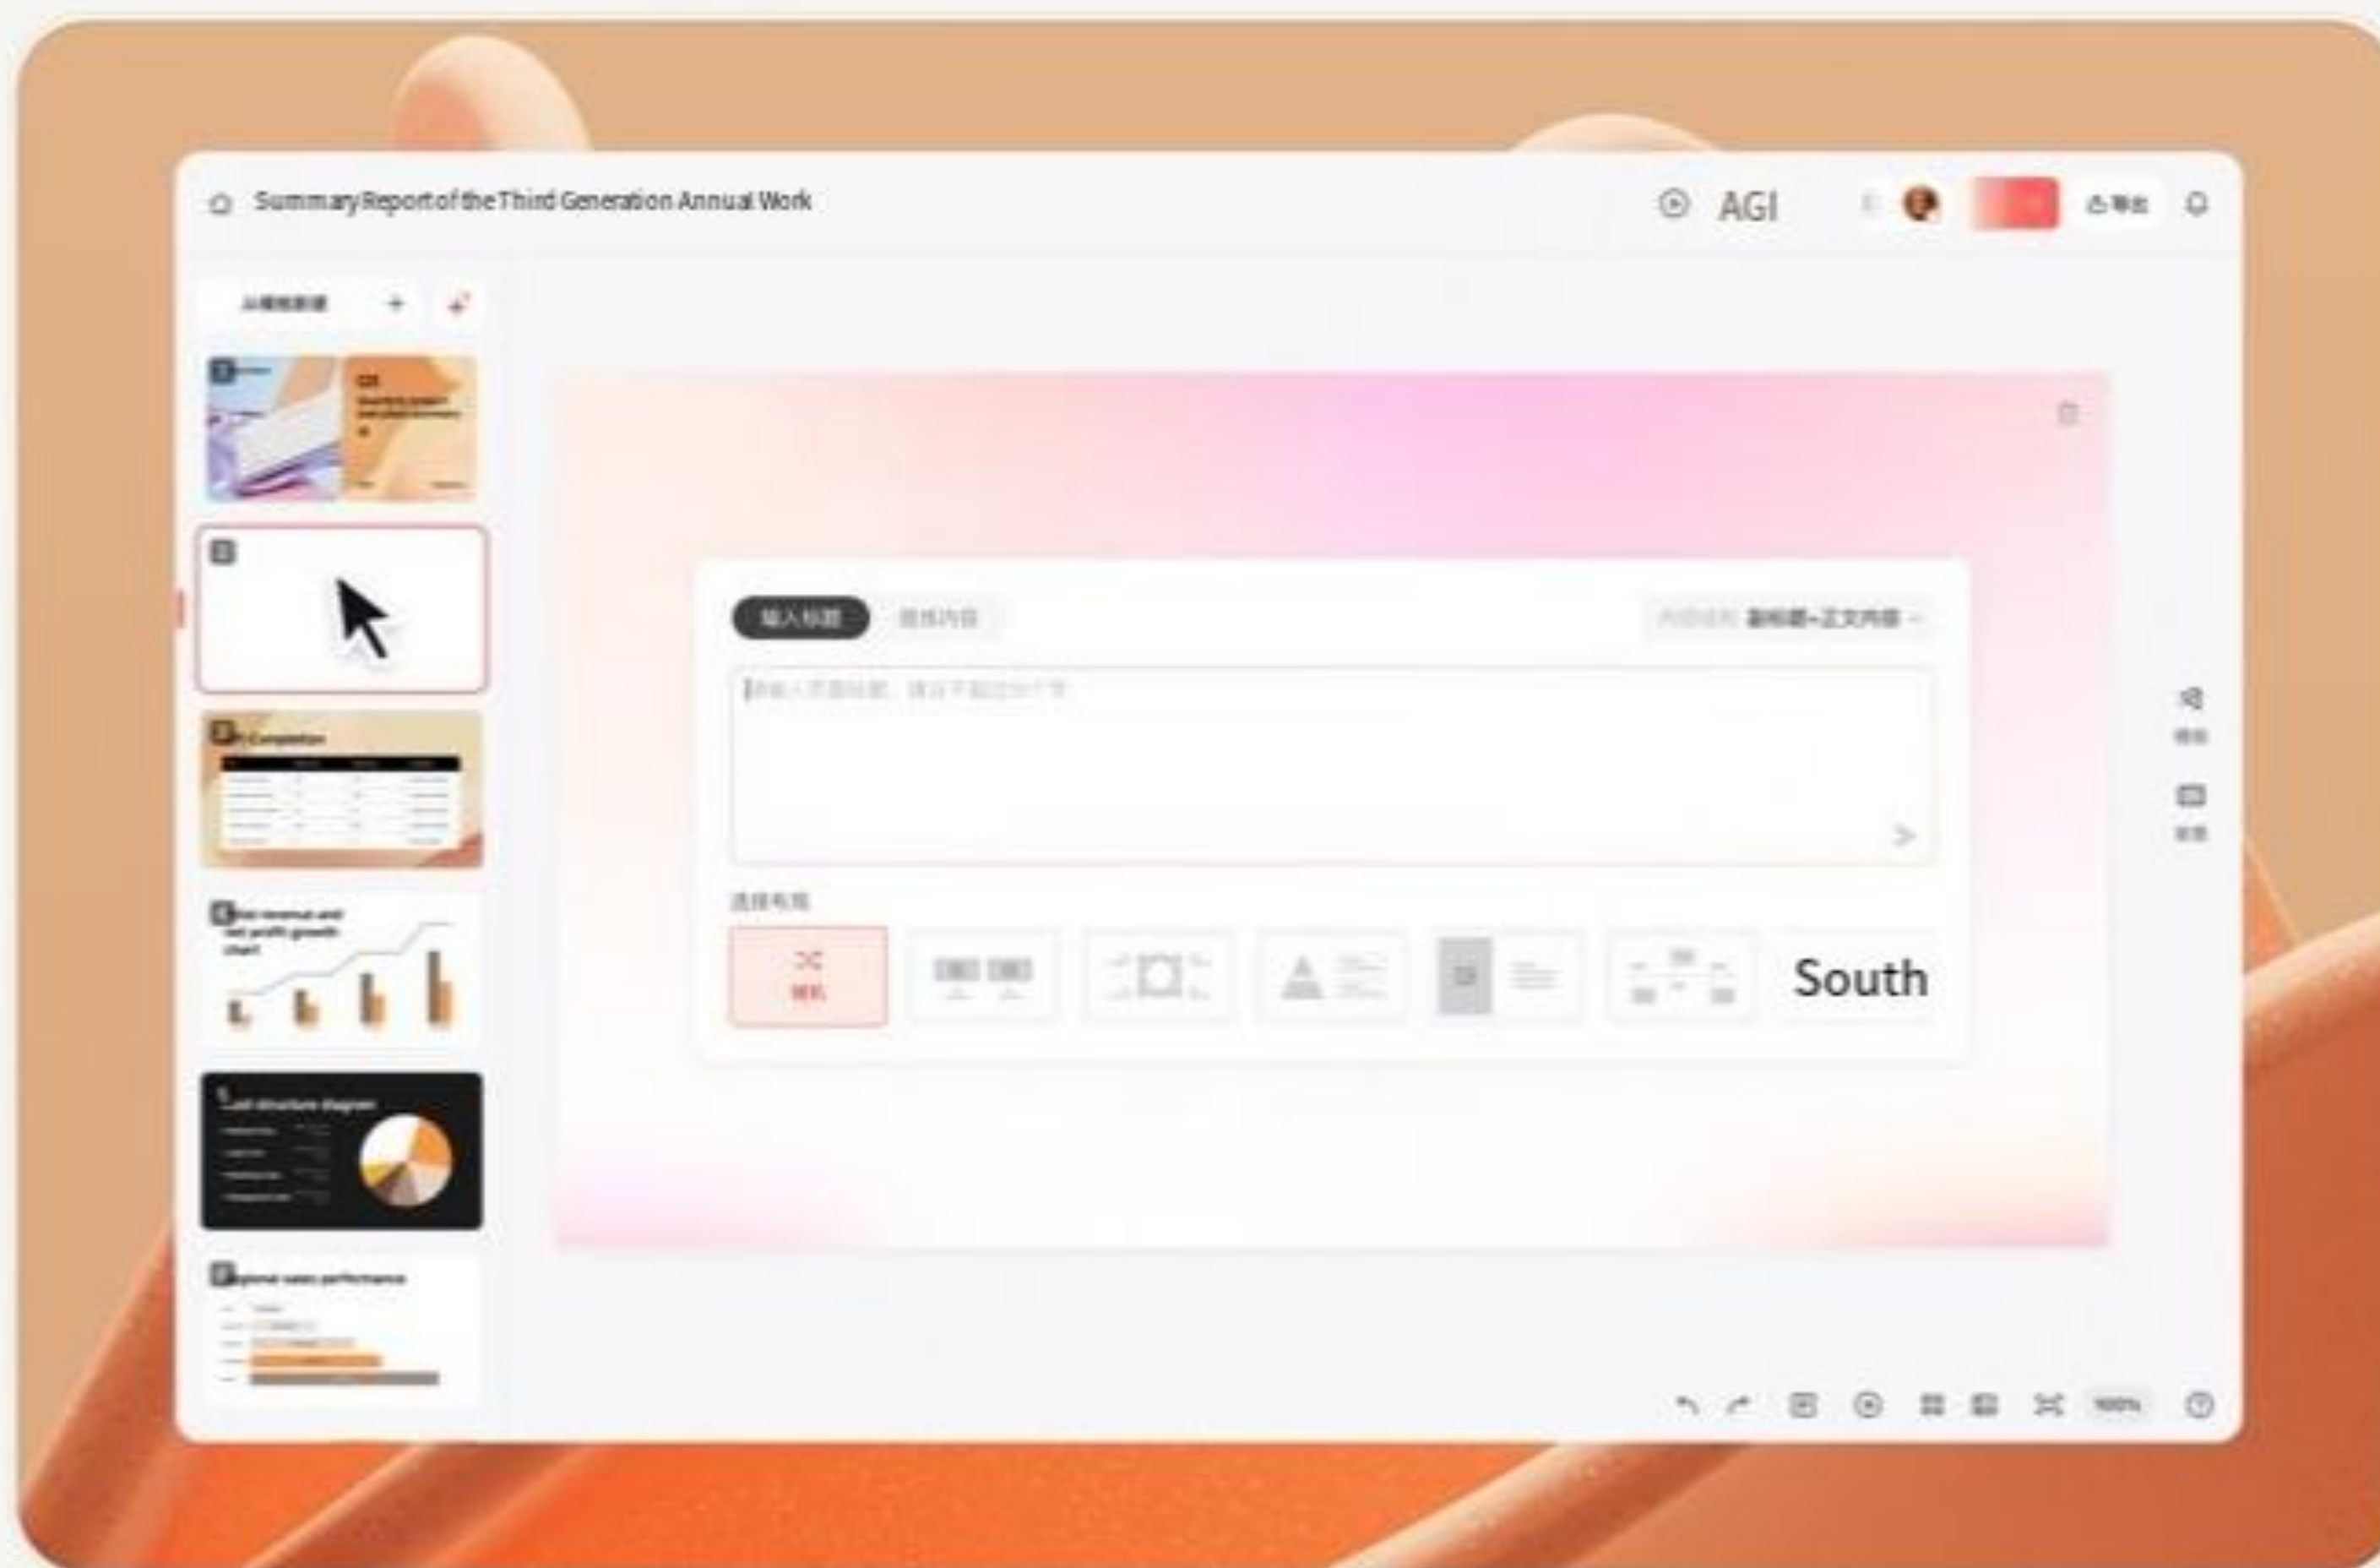

- Support the use of AI assistants for image editing: picture restoration, intelligent cropping, etc. Extract the text from the images, etc.
- Support image-to-image generation, and generate corresponding images through the AI assistant.

- Support for rewriting, extending, summarizing and condensing the existing text. Translation, explanation, modification of tone, etc.
- Modify and re-create specific parts of the PPT

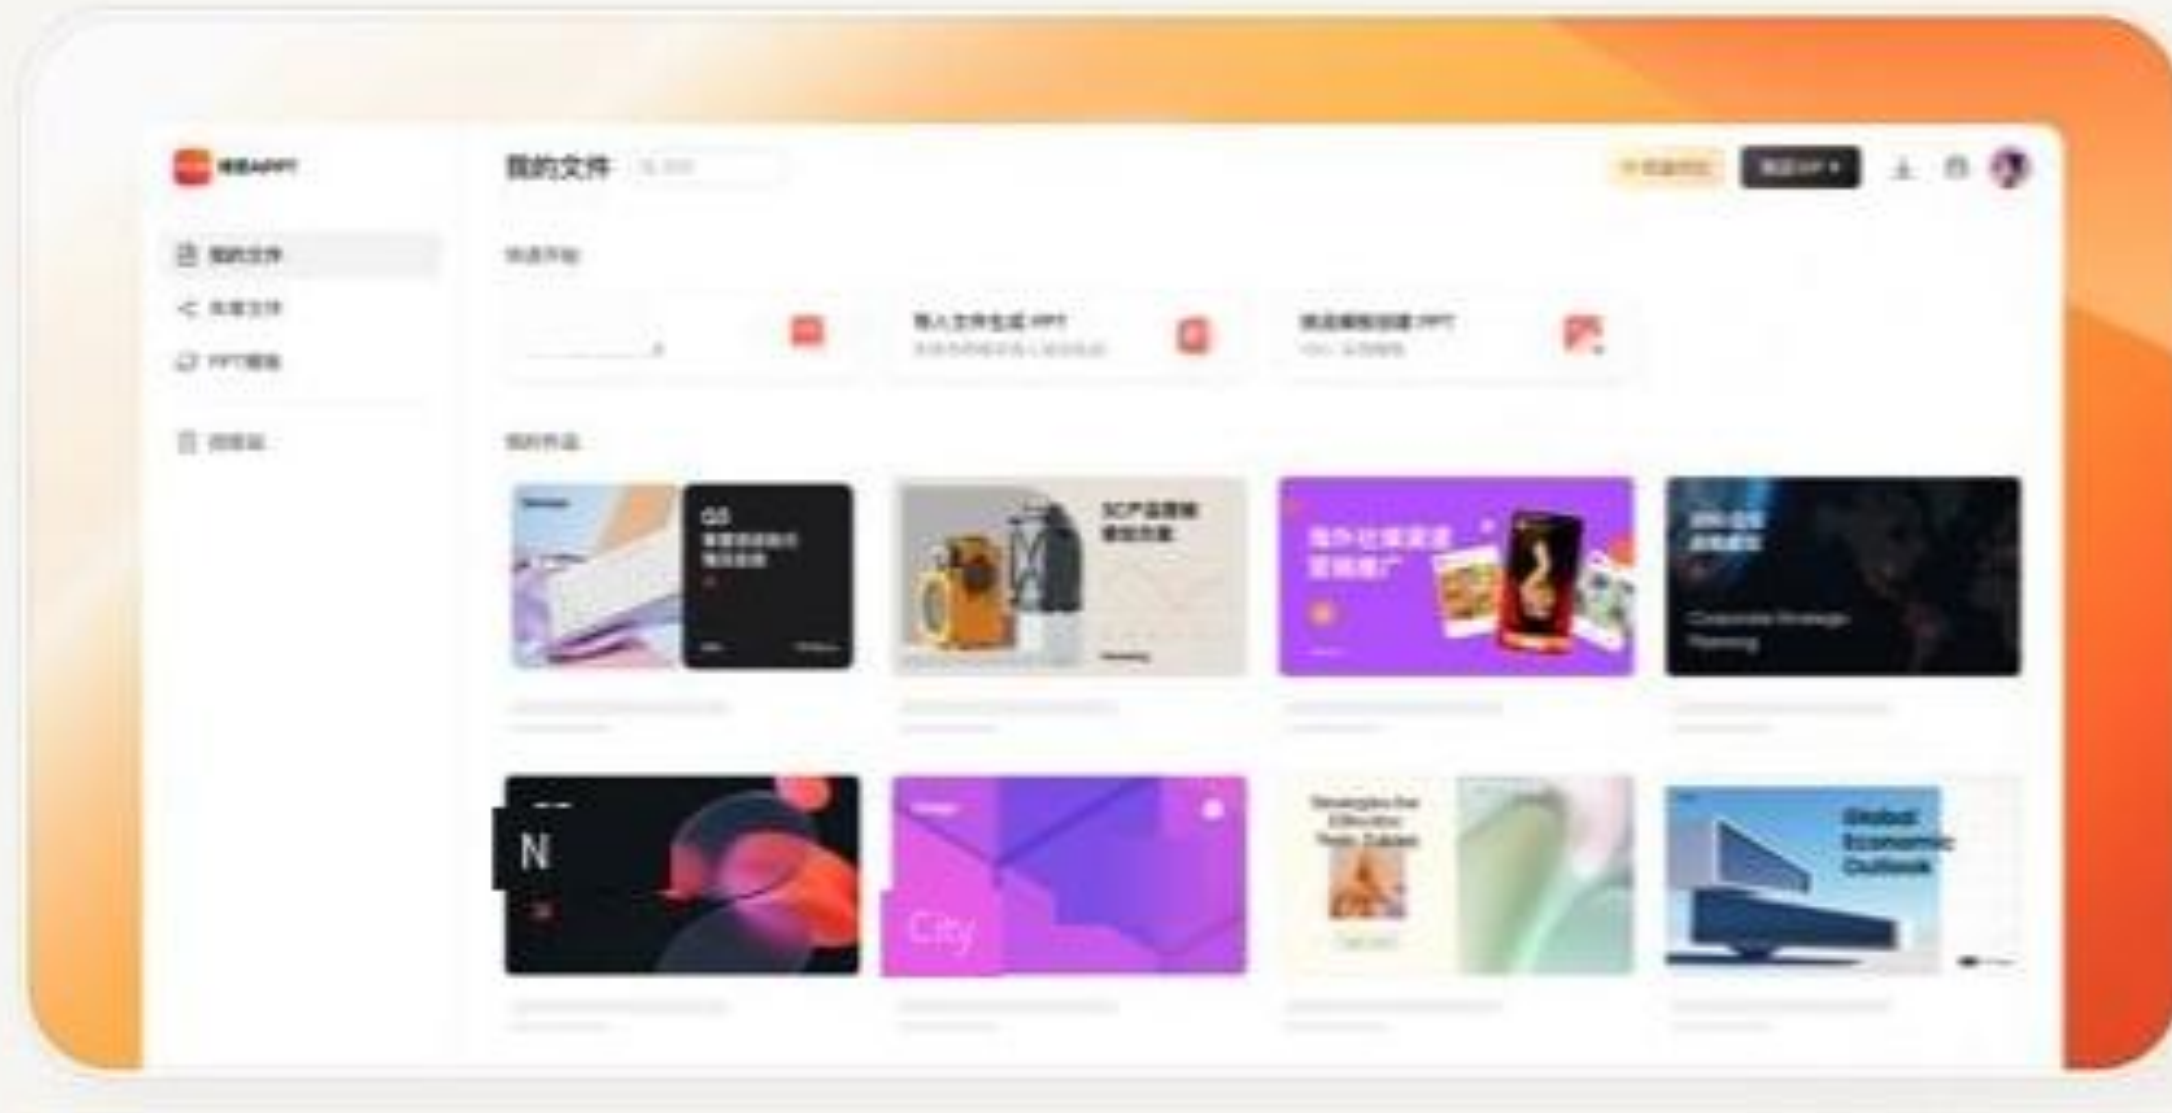

# AI-generated single-page PowerPoint presentation

- Support the generation of a complete PPT content by inputting a title or a large block of text content.
- Use AI to promptly expand the PPT

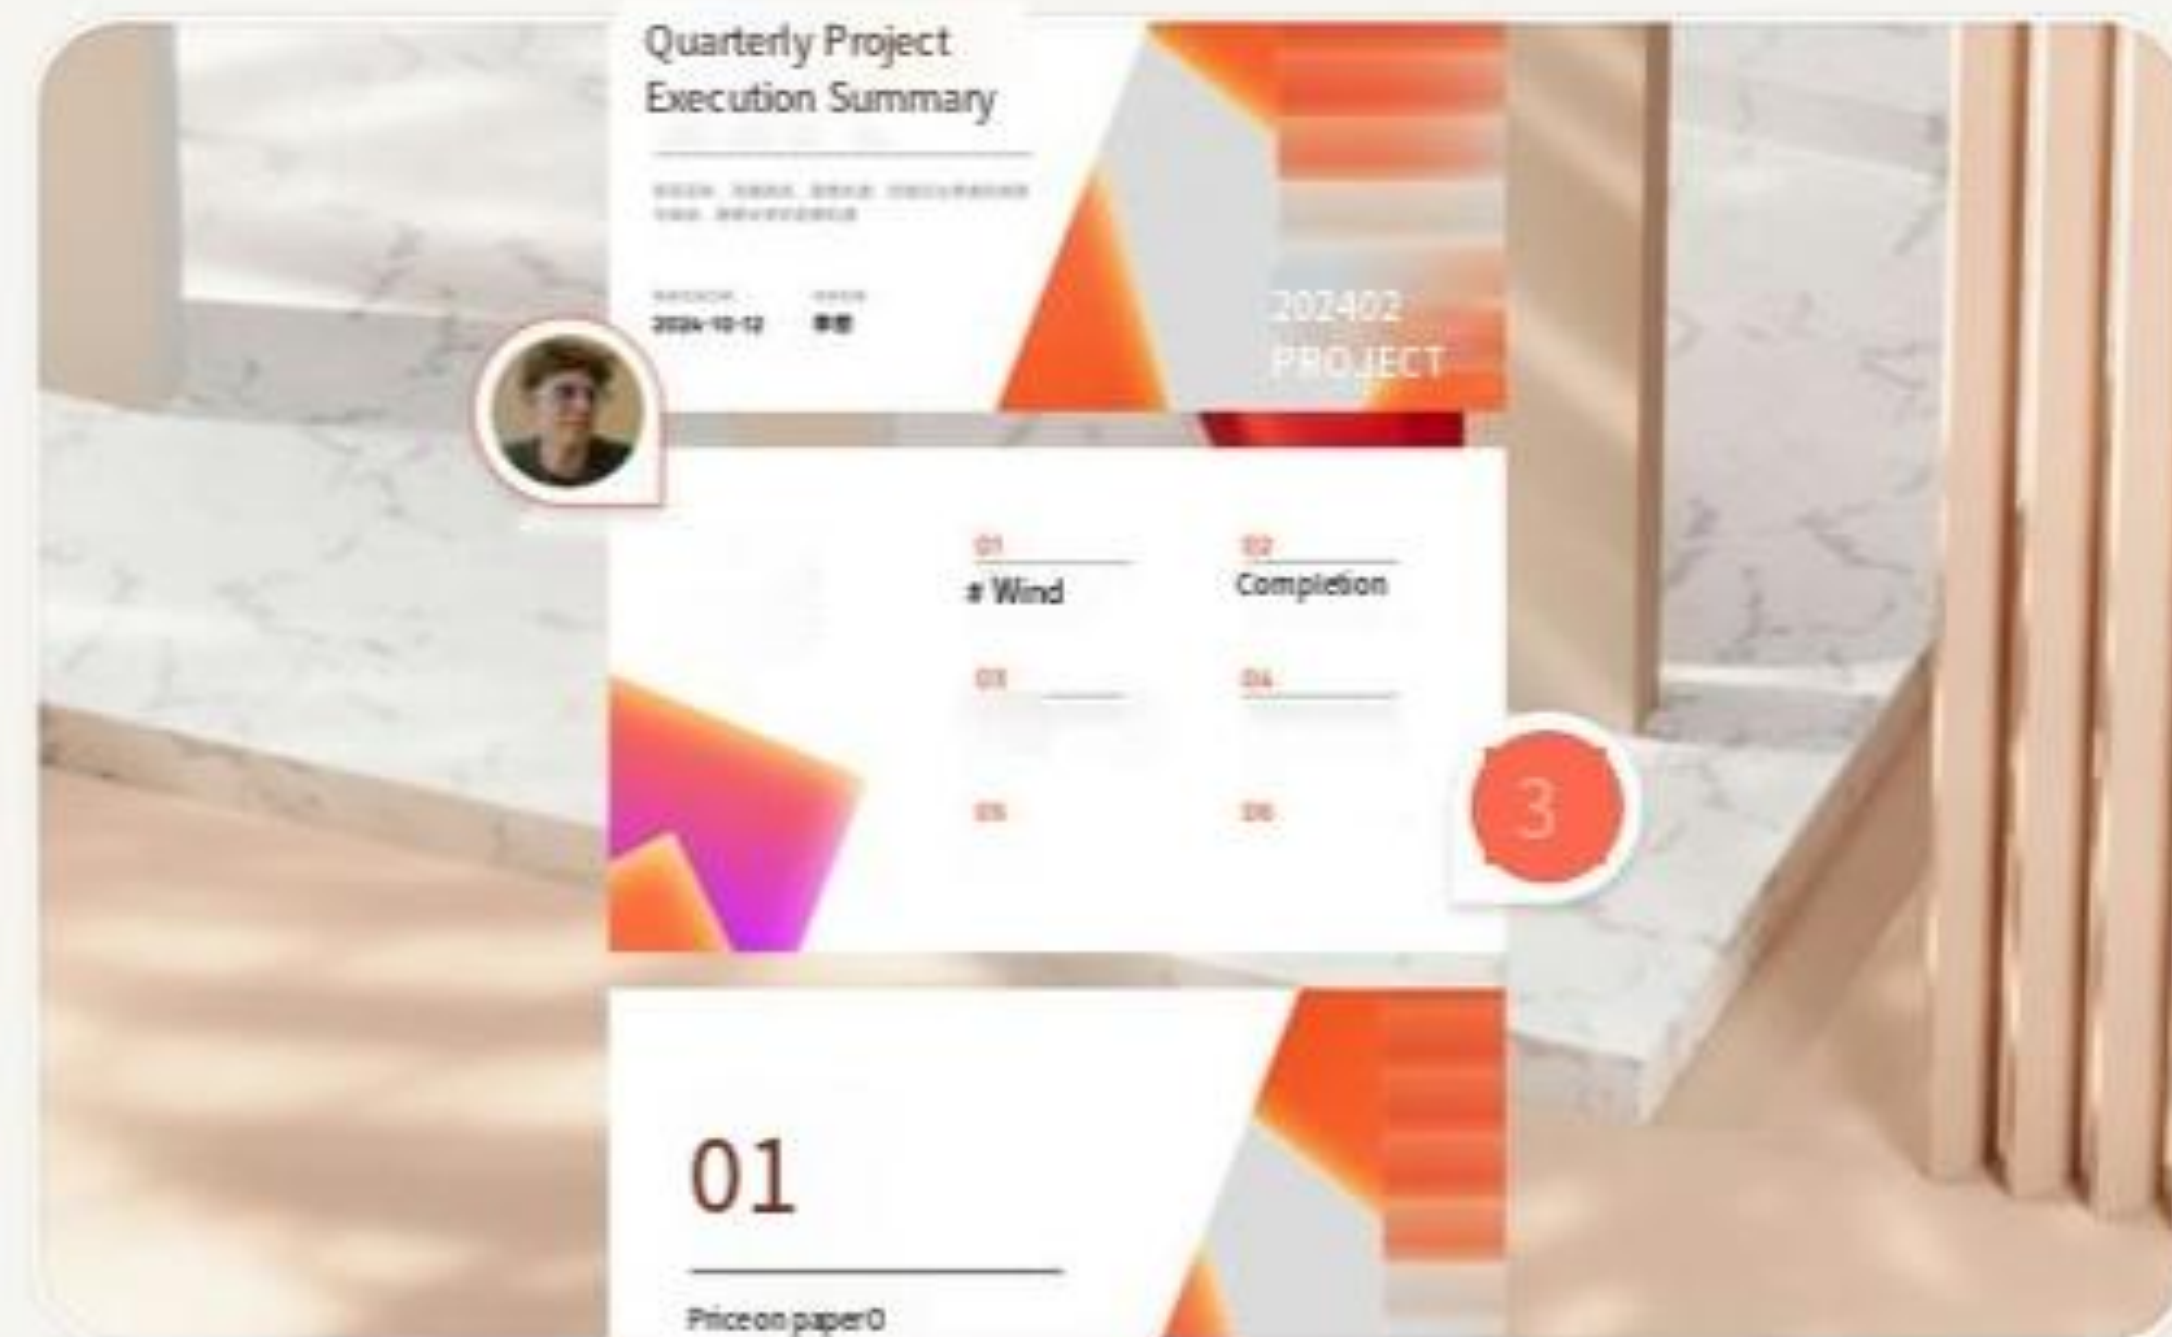

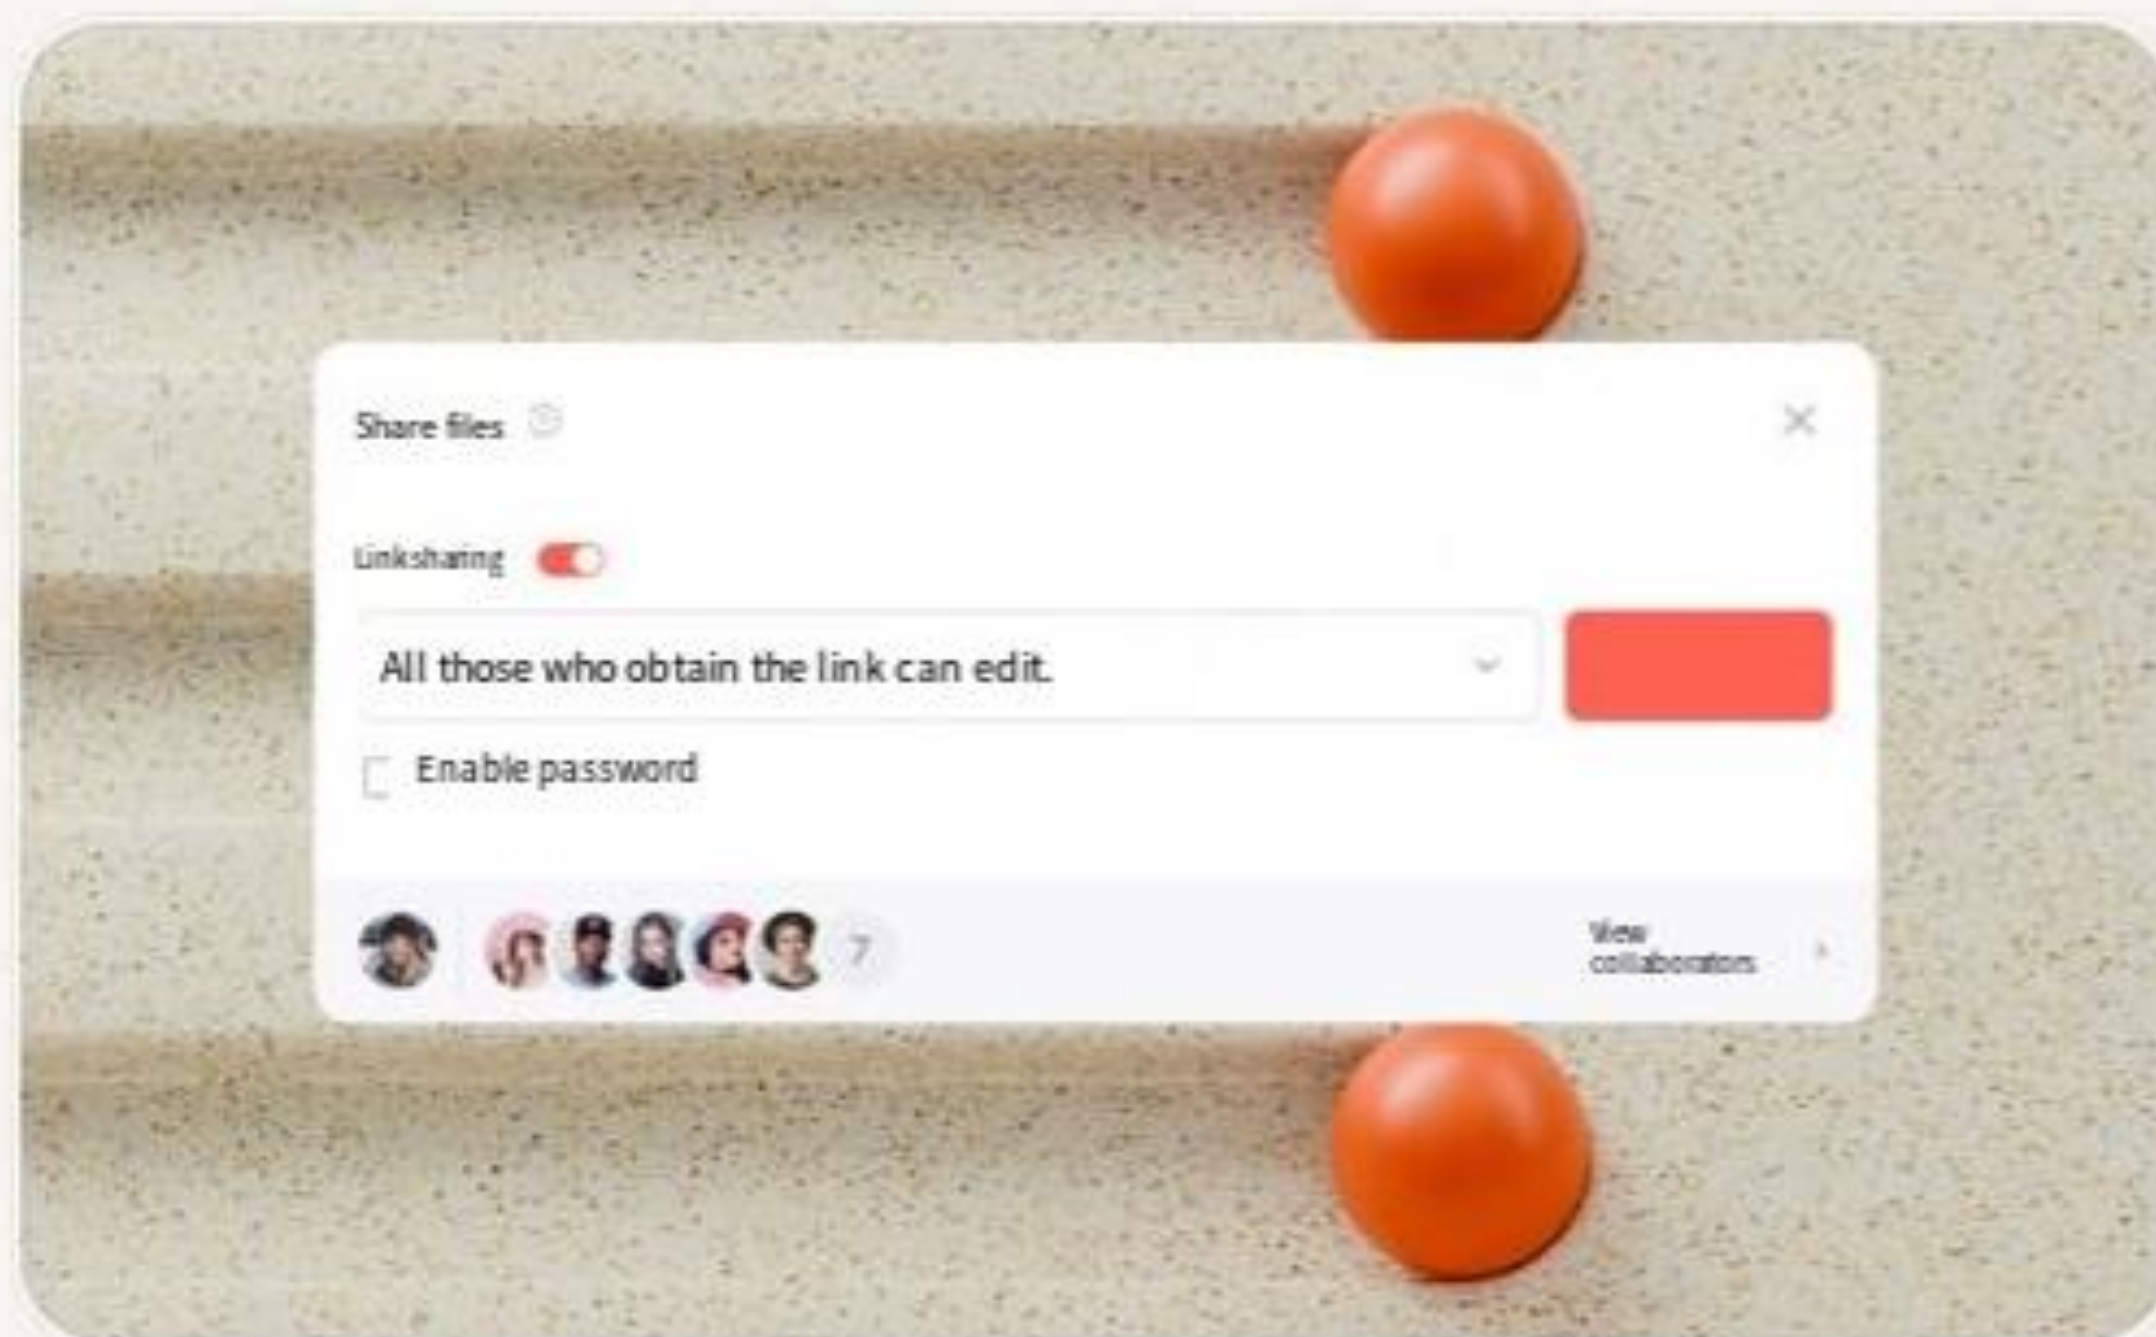

# File management and multiple editing capabilities

- Offer methods such as AI-generated files, imported file generation, and template selection generation.
- Support file management: creating copies, renaming, viewing historical versions, sharing, etc.
- Support file sharing and file search
- Support PPT templates, with a large collection of template resources displayed.
- Provide various types of tools such as text, tables, charts, shapes, and mind maps.
- Support the insertion of various materials such as formulas, pictures, and videos.
- Provide a variety of image resource materials: Iconfont icon library, emoji expressions, Pexels image gallery, stickers, illustrations, image themes, maps, and many other resources.
- Support one-click color replacement and one-click change of image theme resources

# Sharing and Collaboration

- Provide file sharing and collaborative editing capabilities

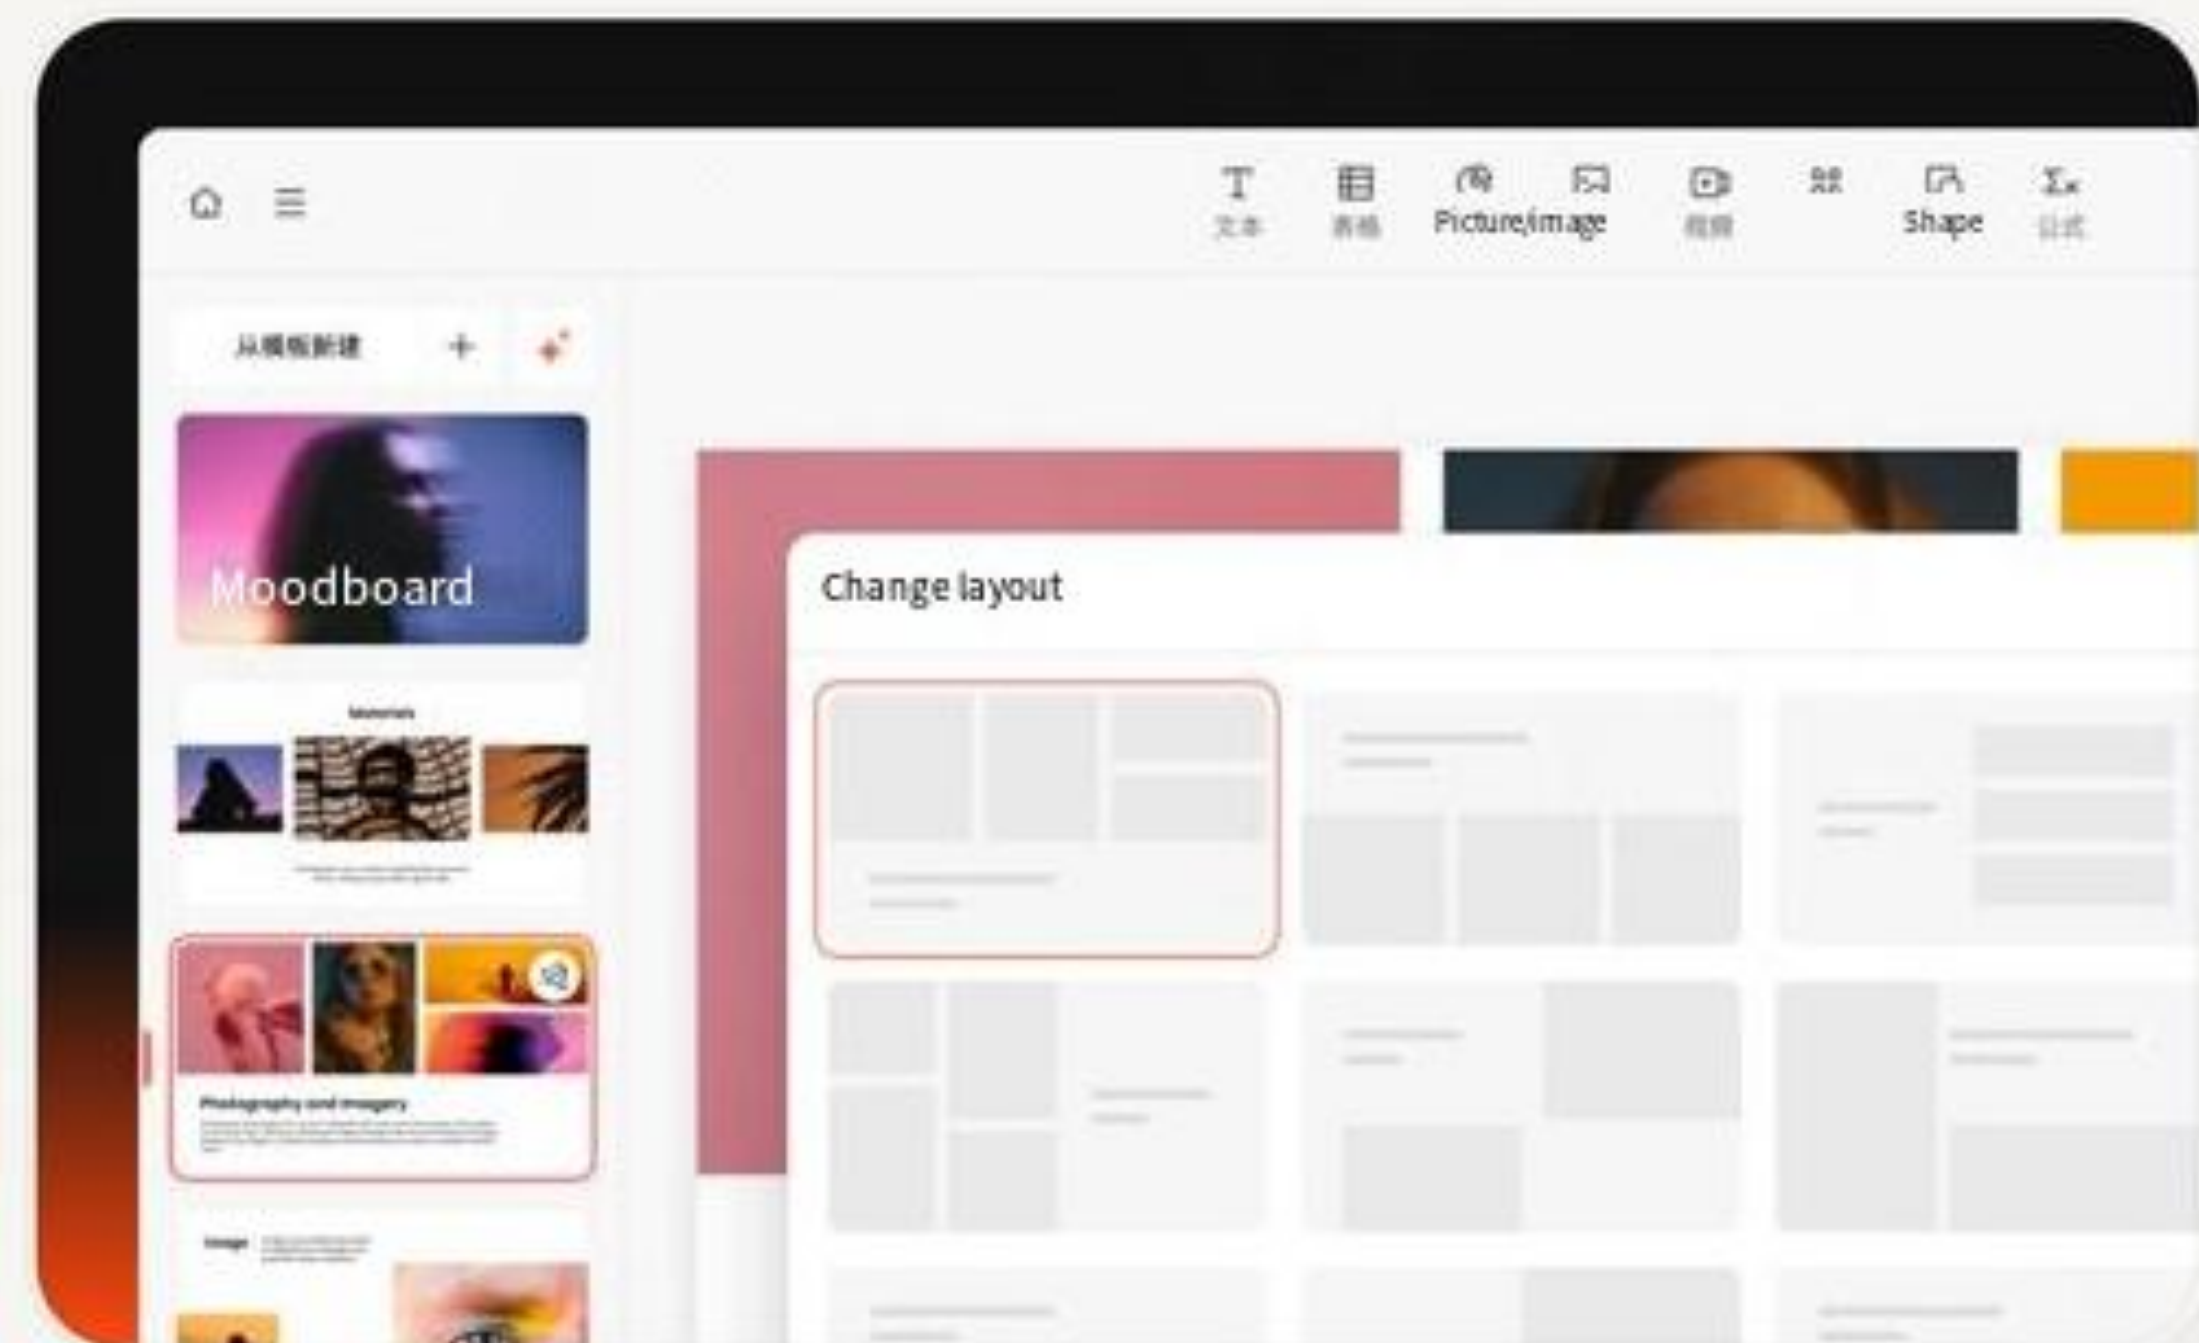

Supports collaborative editing by multiple users, making it more convenient to summarize and organize PPTs.

- Support the ability to comment on and reply to individual slides or individual graphic elements in a PPT.

The revision of PPT opinions is more intuitive.

# Theme and Layout

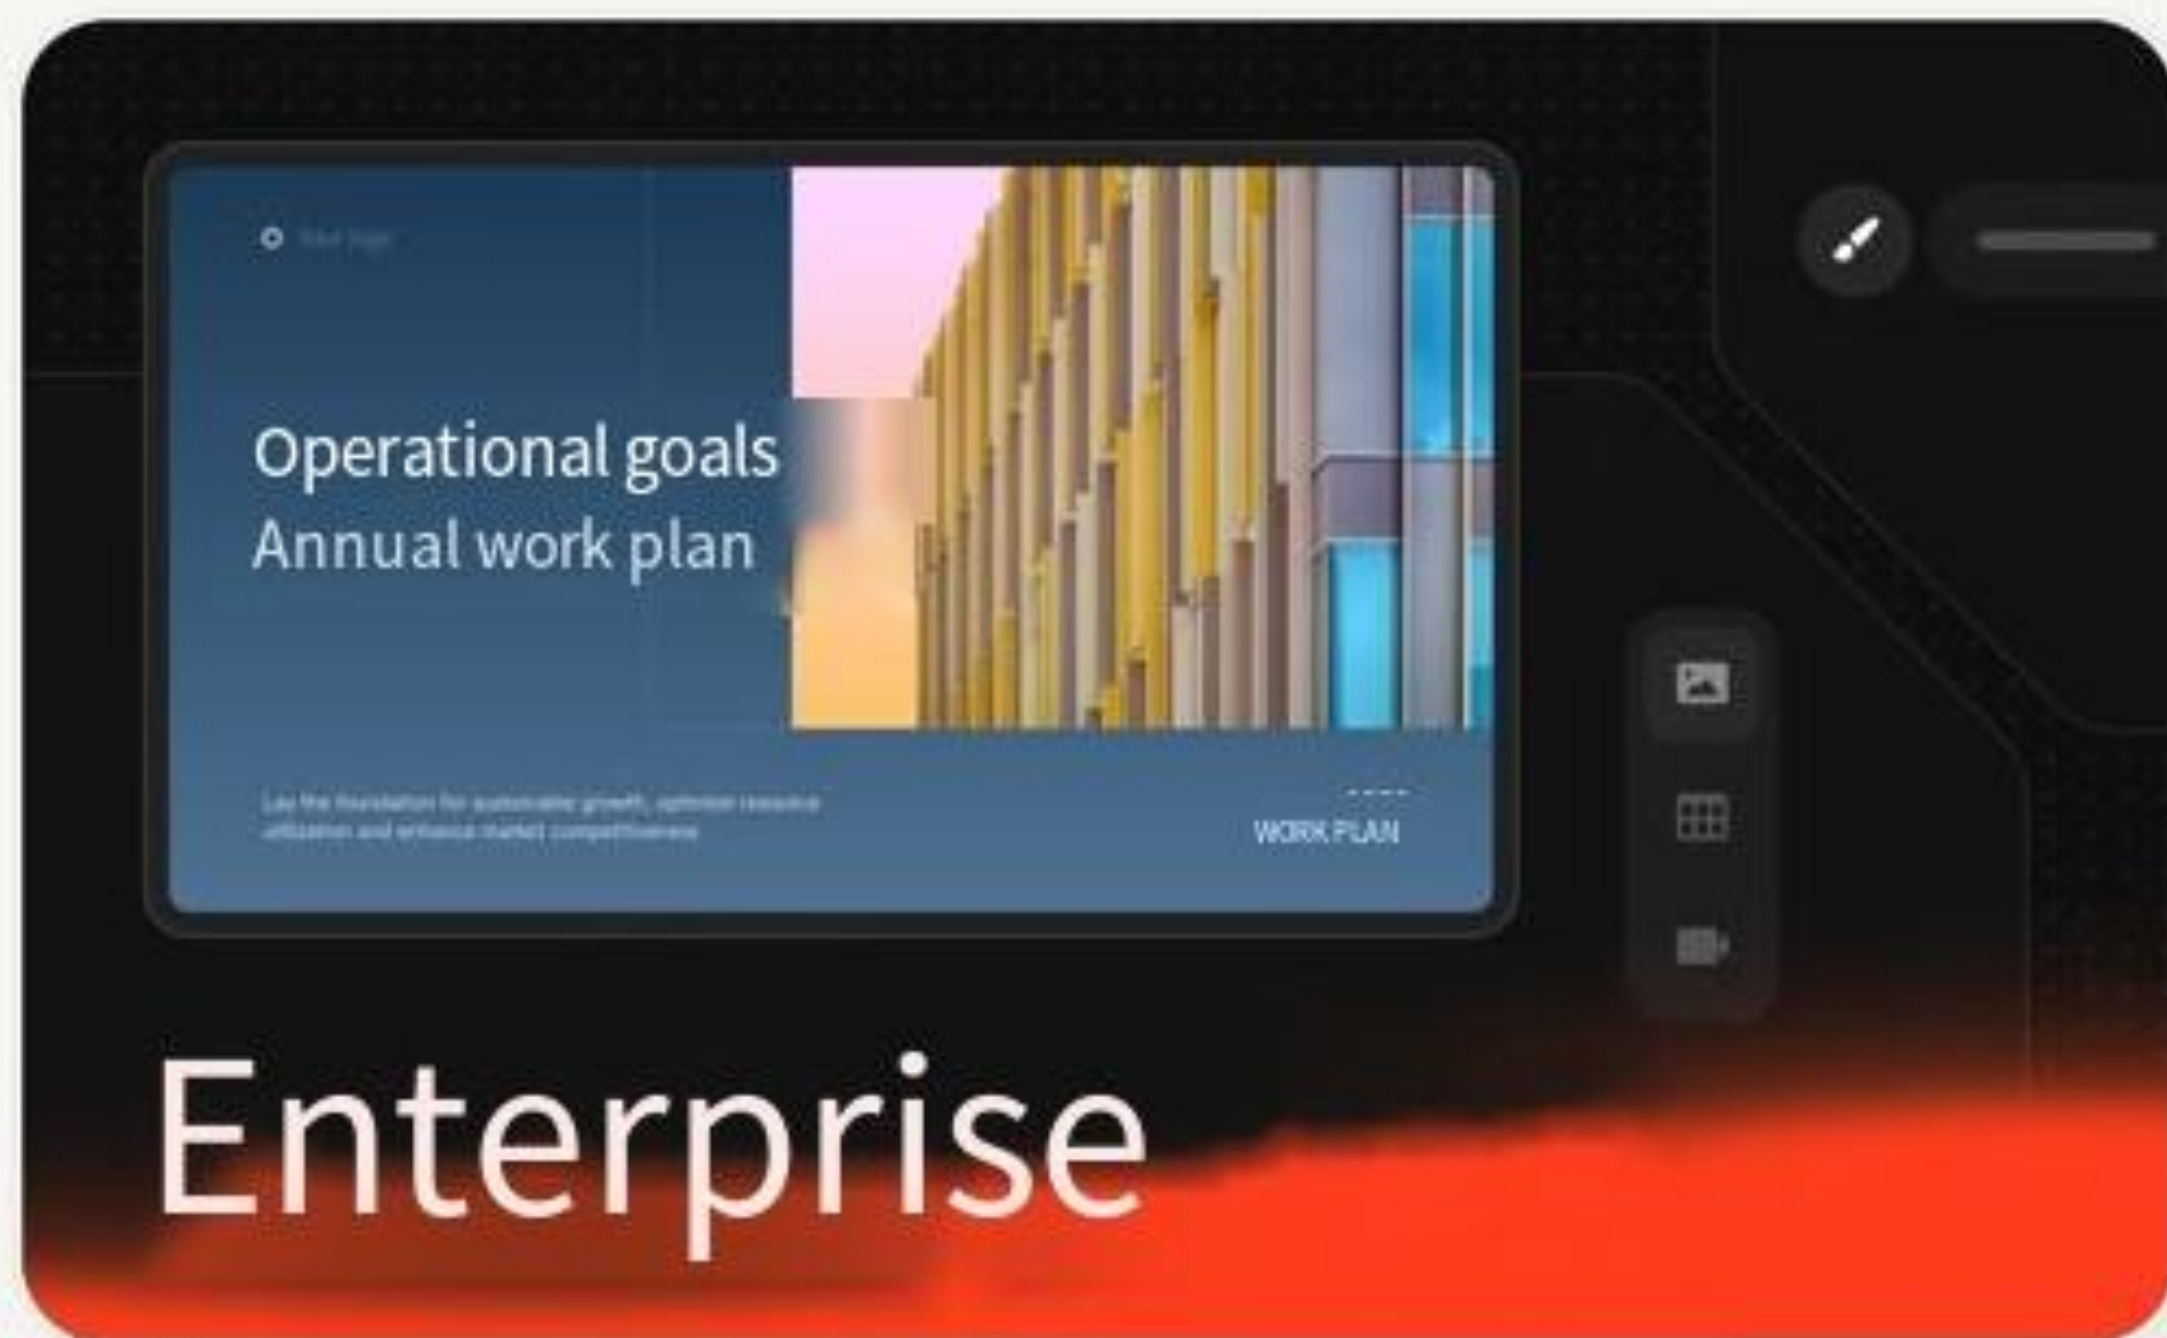

• A vast number of theme templates, supporting one-click theme style switching

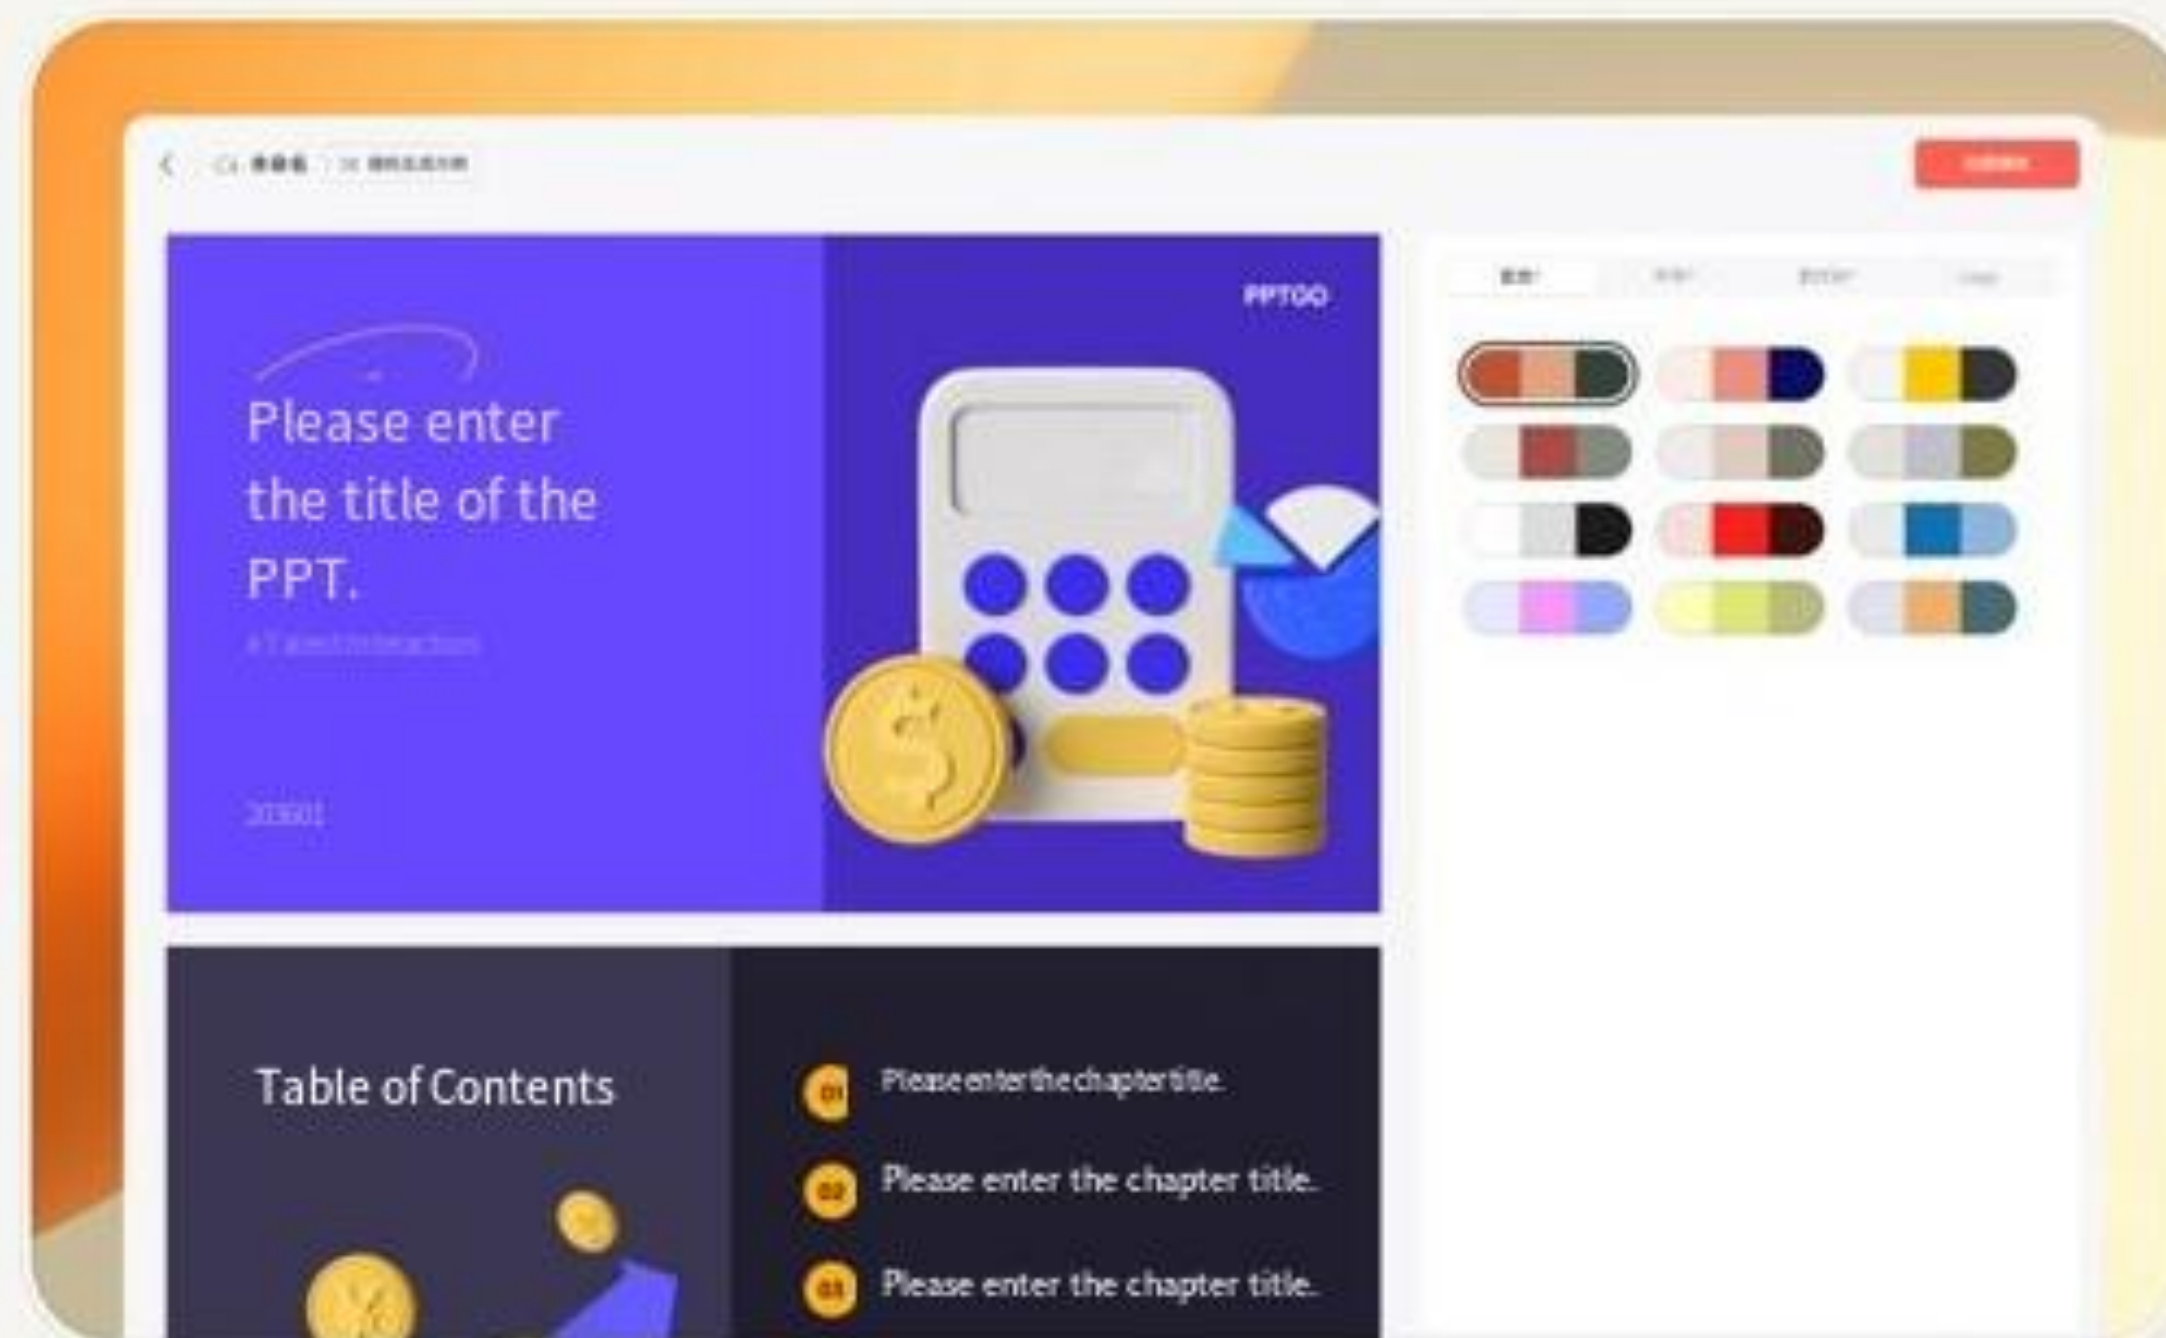

• Intelligent layout recognition, supporting the switching of multiple layout styles

# Custom template

Support exclusive customized enterprise templates, and also provide a template customization backend for companies to enable their designers to directly create.

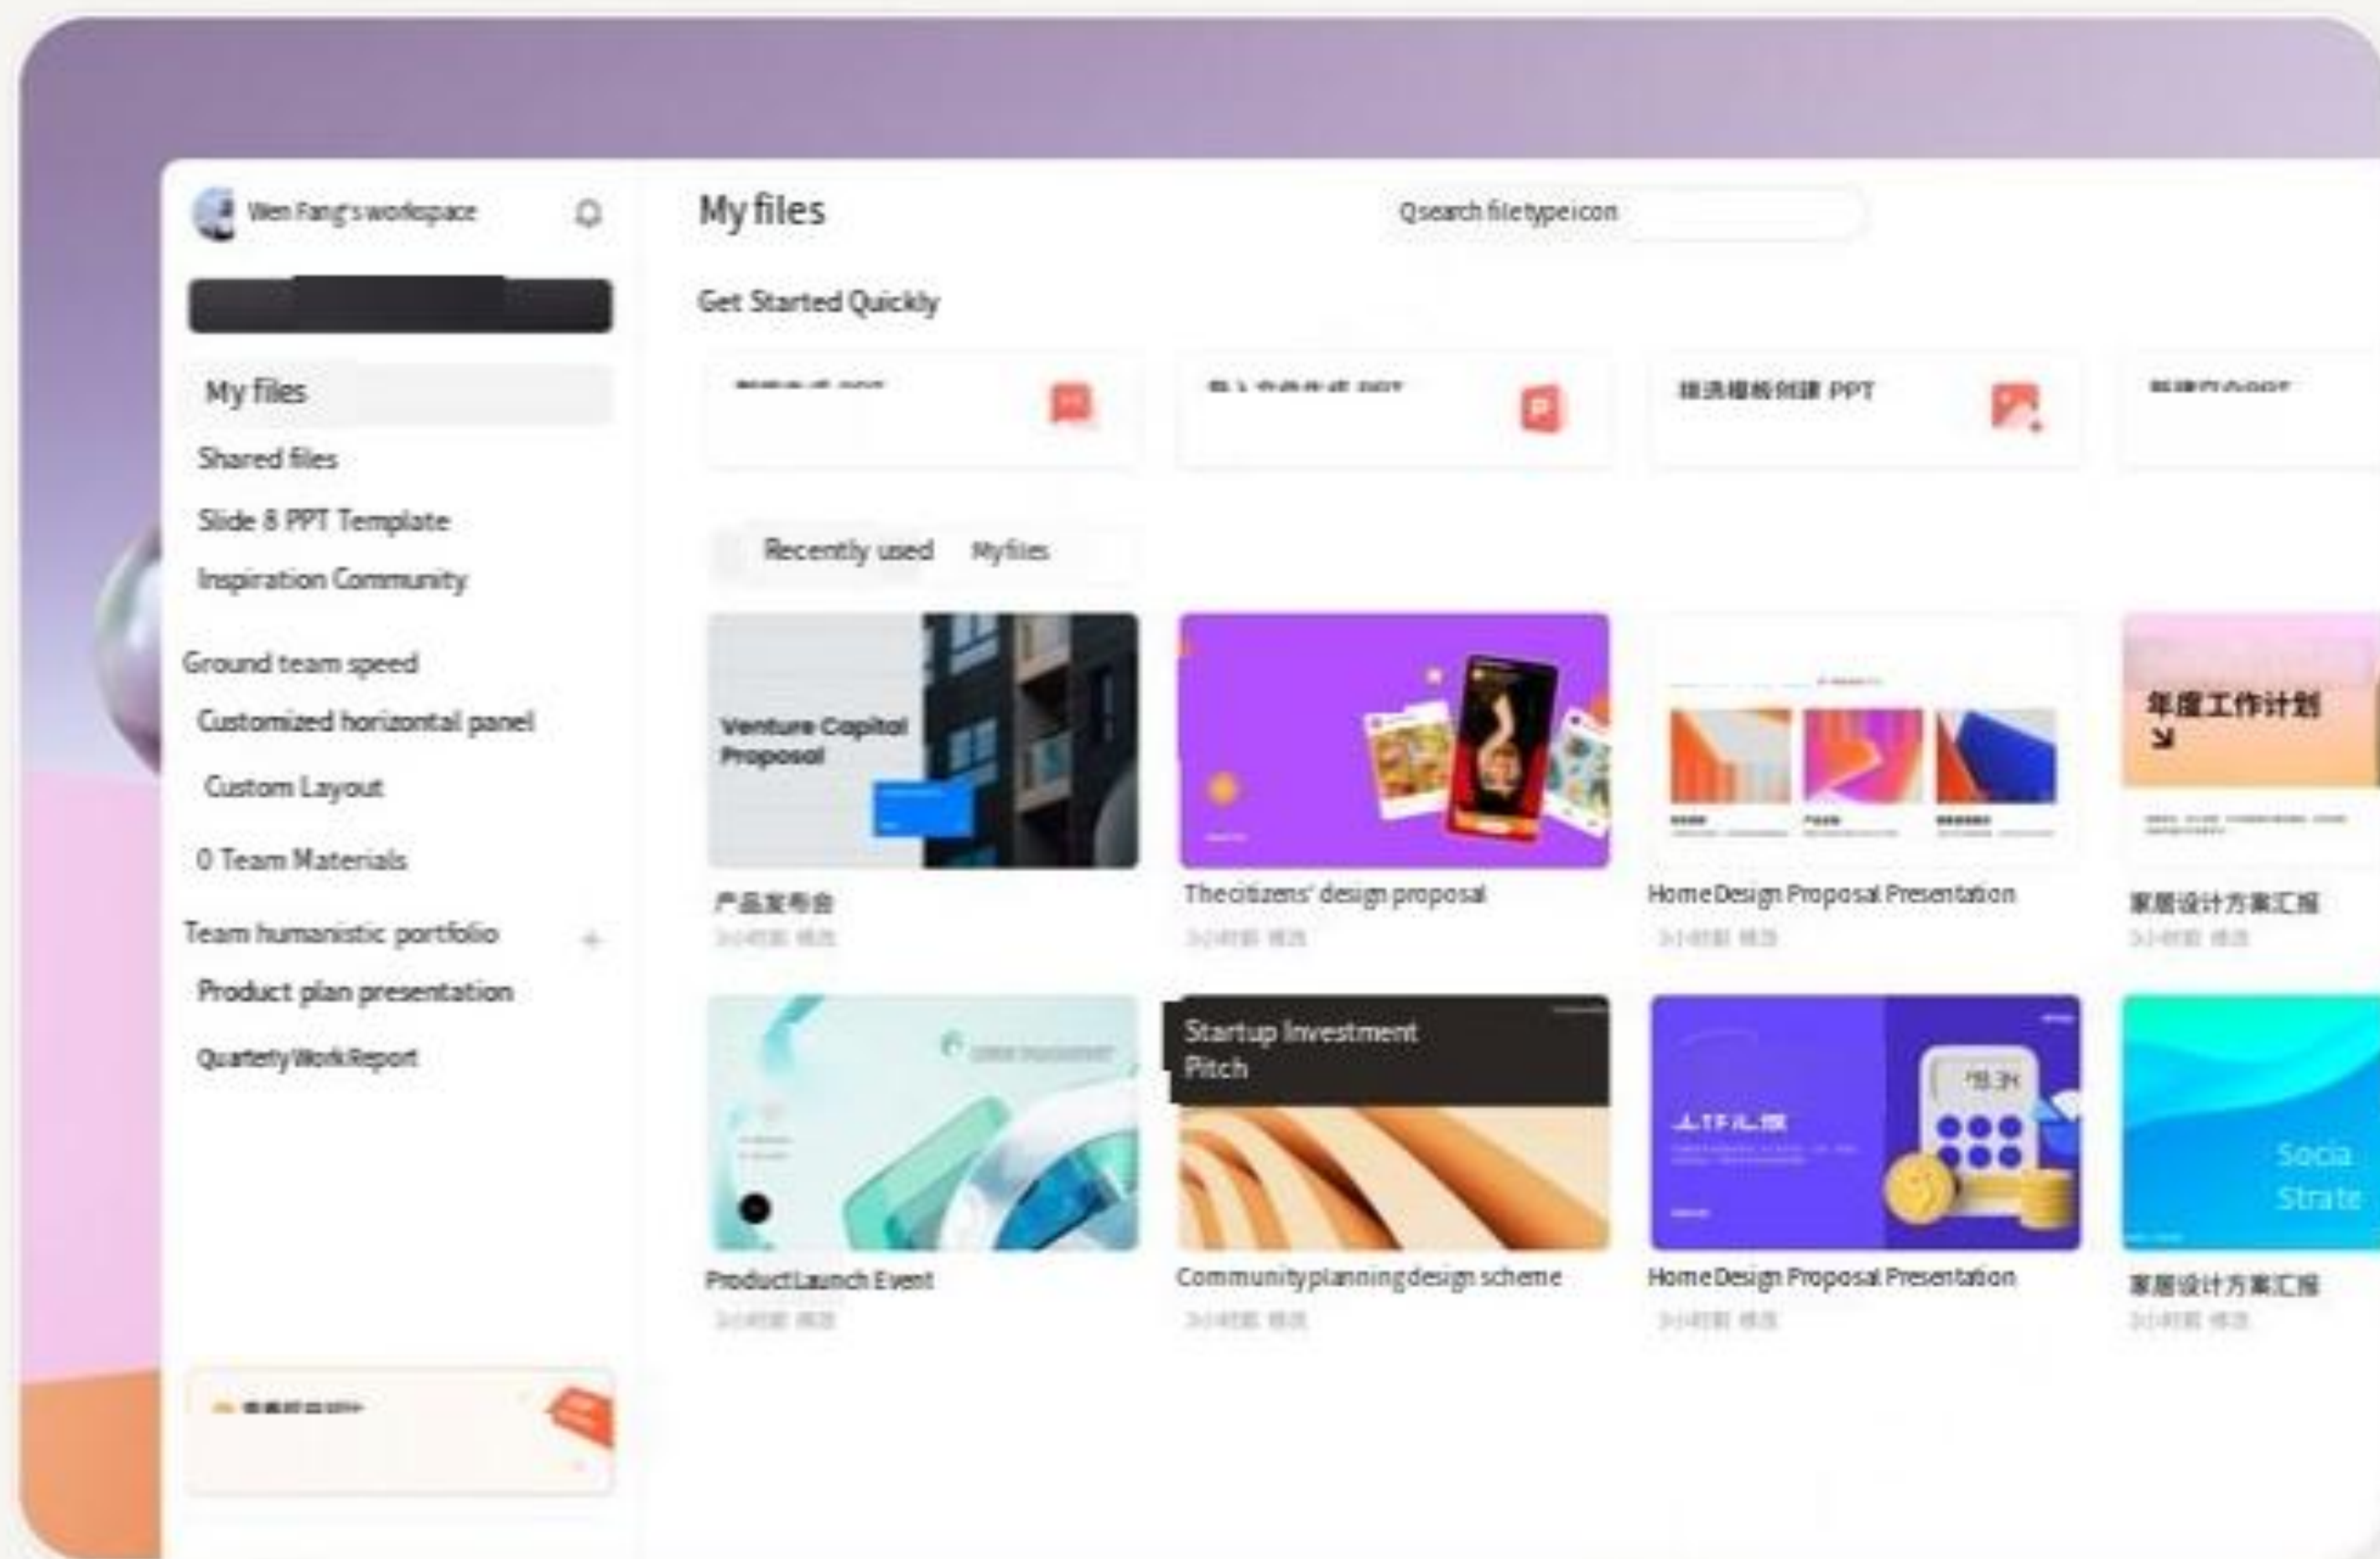

Ready for launch

Support the setting of custom templates, including color schemes, fonts, material packs, logos, etc.

# Team organization version

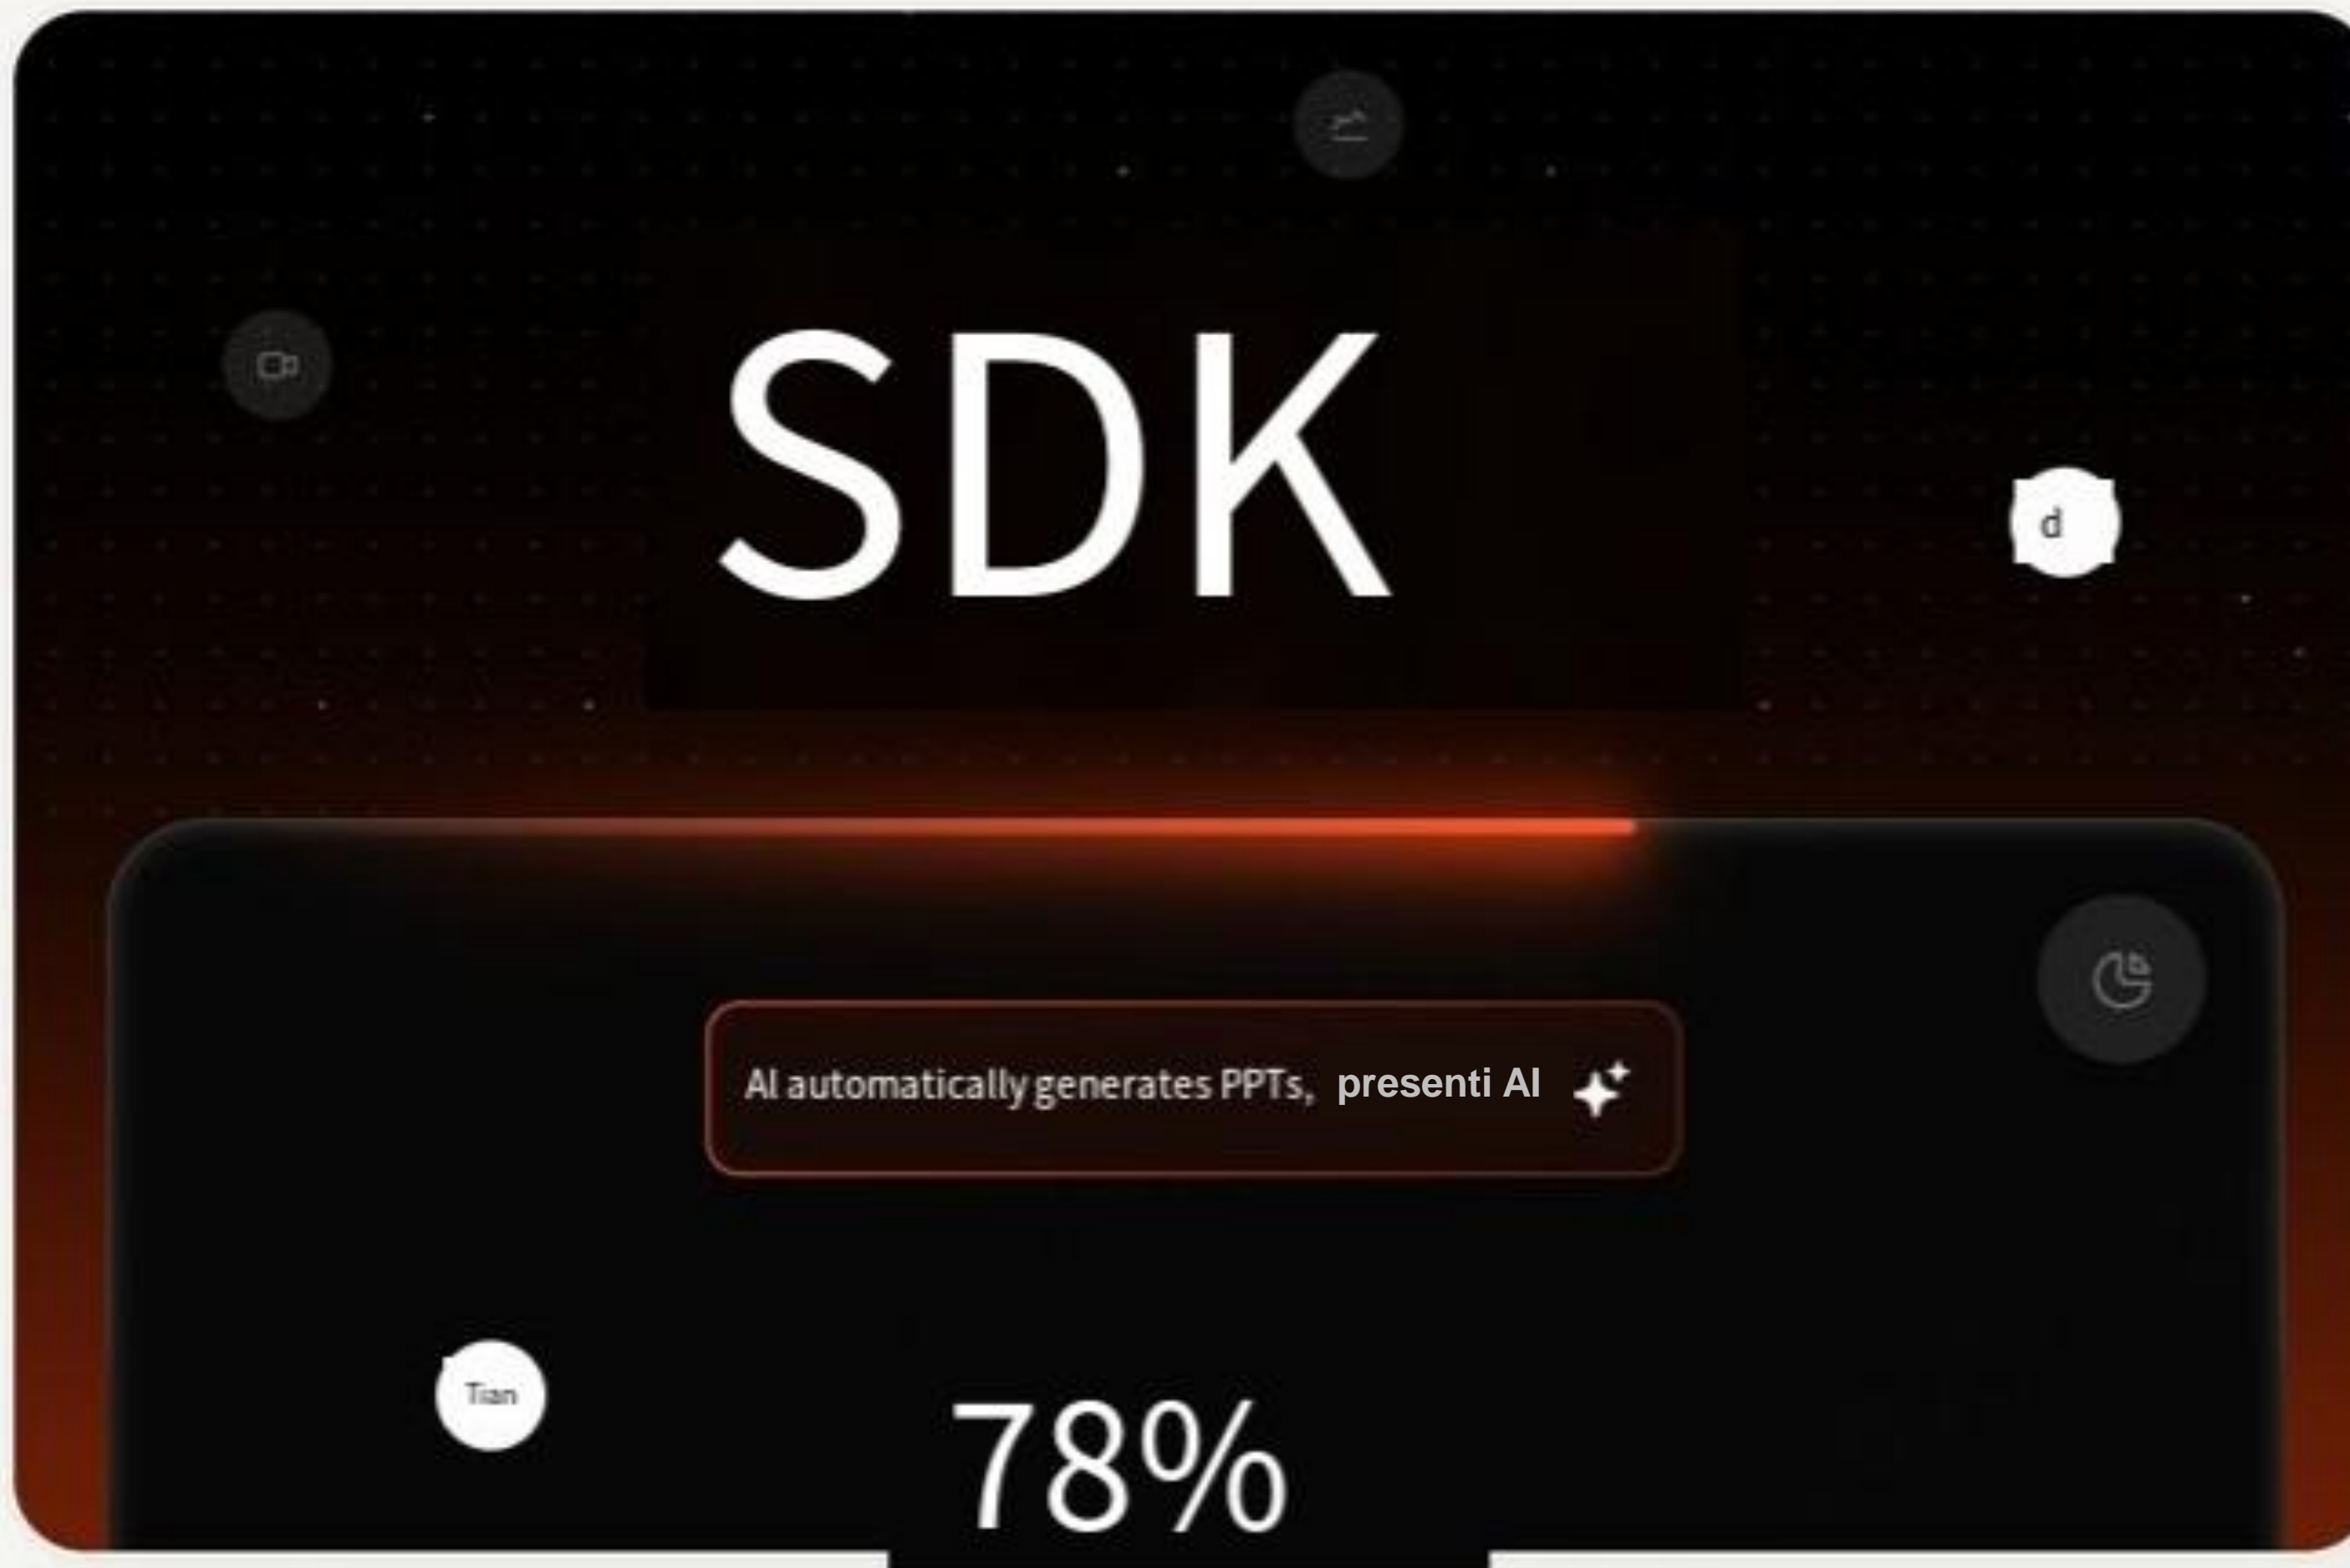

Coming soon

- Support the creation of team spaces, and collaborative management and modification of various PPT files.
- Support team resource management, with unified management of templates, layouts and material resources.
- Supports space configuration and personnel management, with convenient operation for team management.

# SDK and privatization

- Support SDK integration
- Support integration with the company's internal models
- Support for the privatization of AI-enabled solutions and the privatization of non-AI solutions

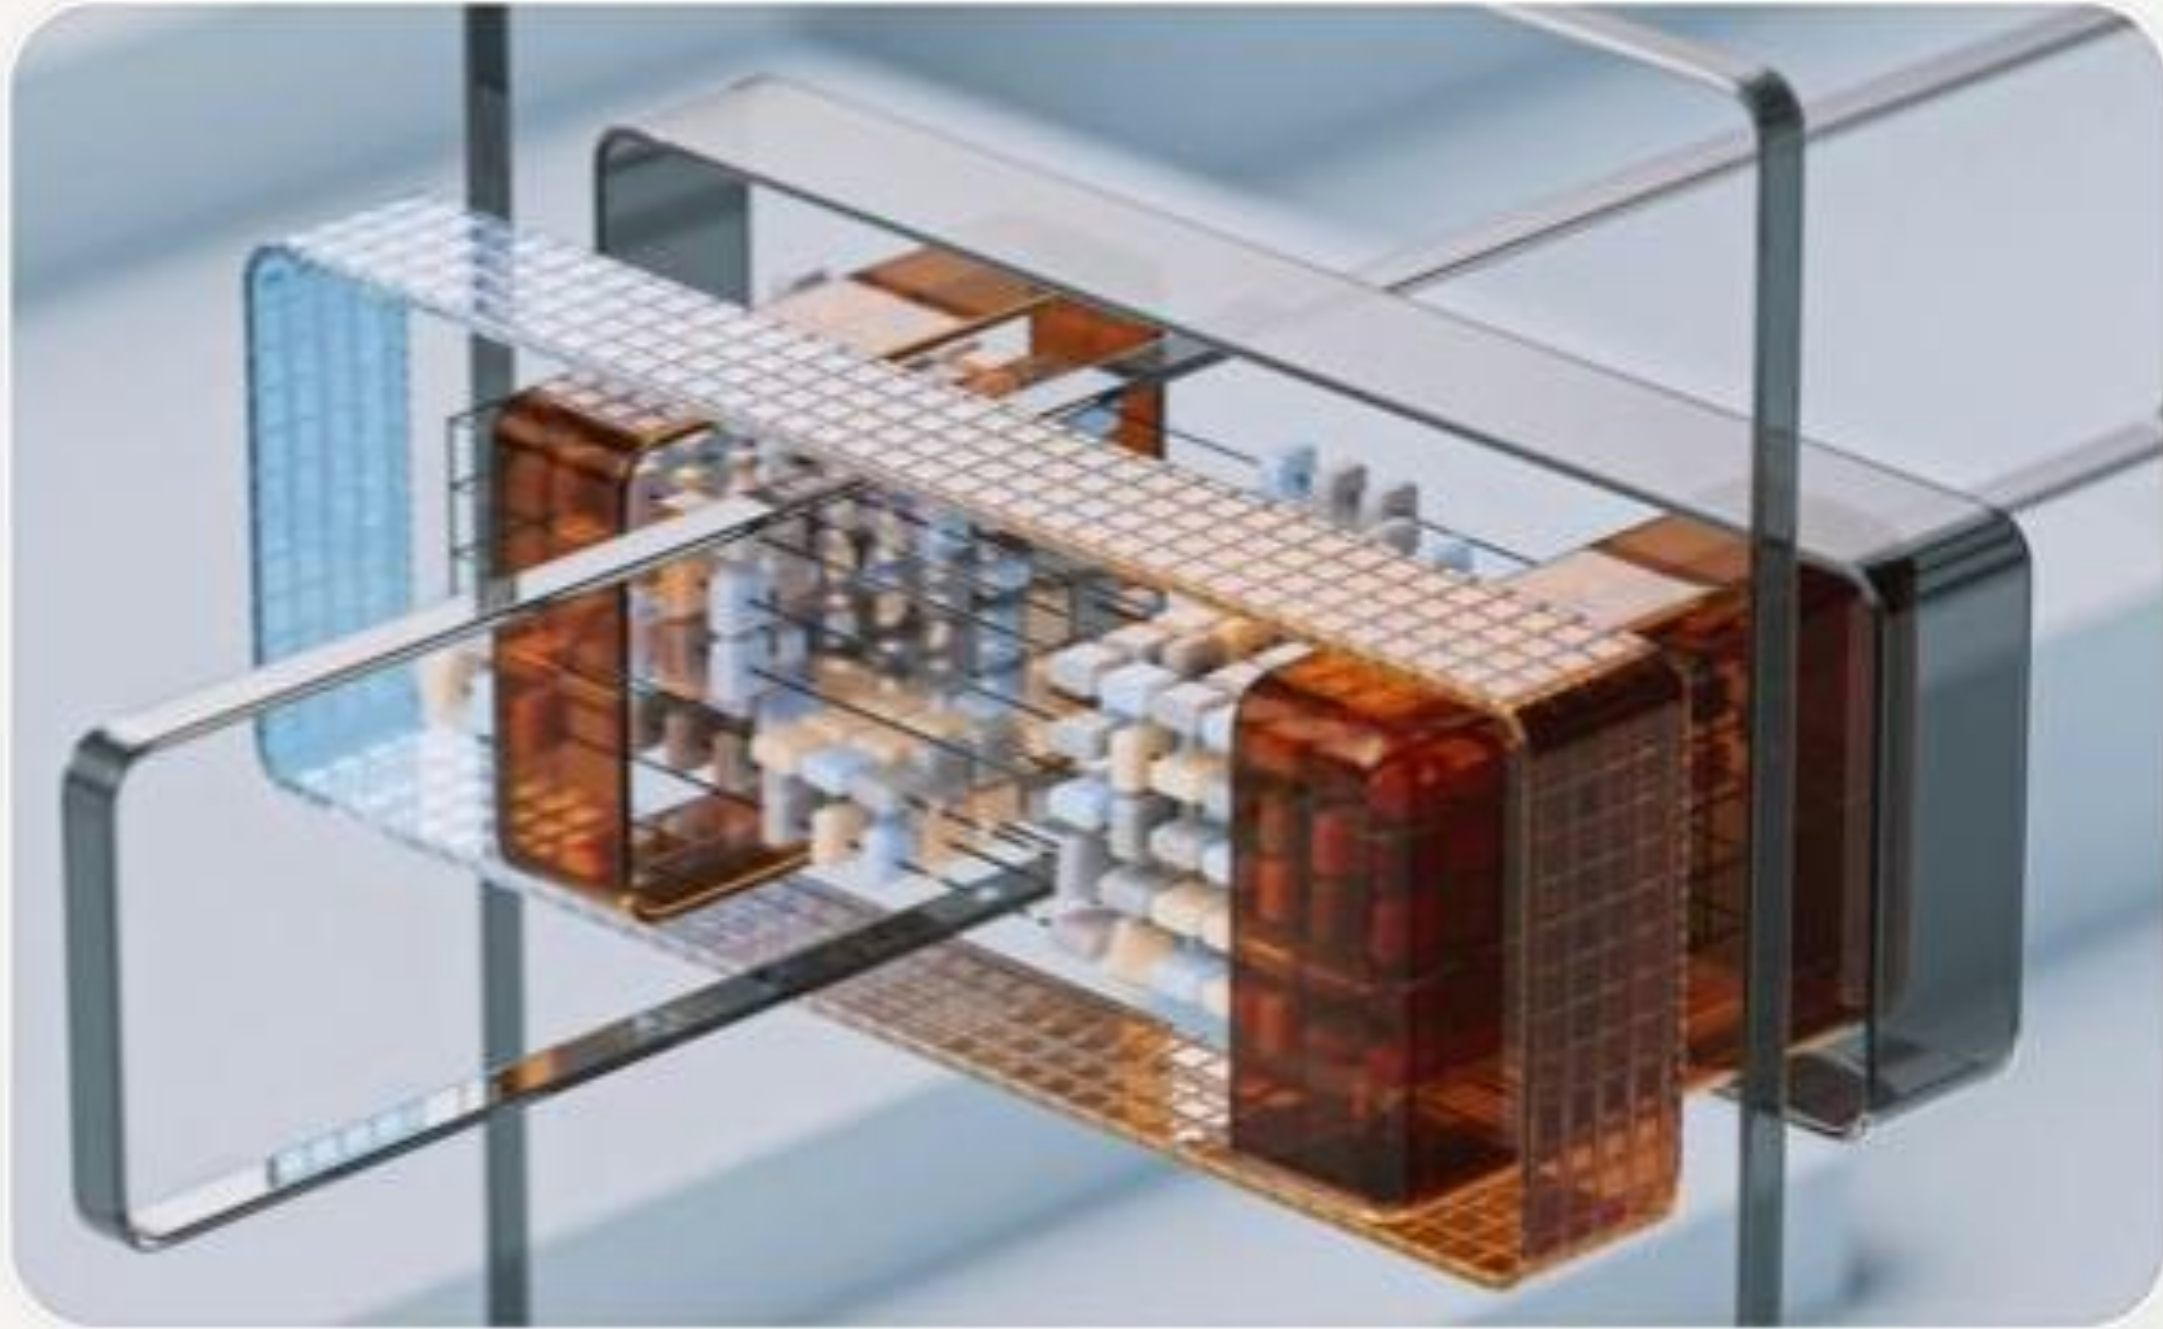

# 03 Customer Case Study Sharing

Future  
plans

# Baidu Netdisk

Support integration with the company's internal models

Integrate SDK to enhance product capabilities and jointly serve customers

# A well-known educational company

- AI can automatically generate teaching lesson plans, efficiently completing the lesson preparation process.
- AI-Powered PPT-based Teaching Design, continuous review and improvement, enhancing teaching capabilities
- Built-in a wealth of educational training templates, suitable for any scenario

# Hardware integration, efficient empowerment

- The SDK integration enables the intelligent hardware devices, and AI can automatically generate PPTs.

# ◈ A leading fund company

Customized enterprise-specific AI town platform

Support customized enterprise-specific theme templates, which can directly enhance the efficiency of reporting.
